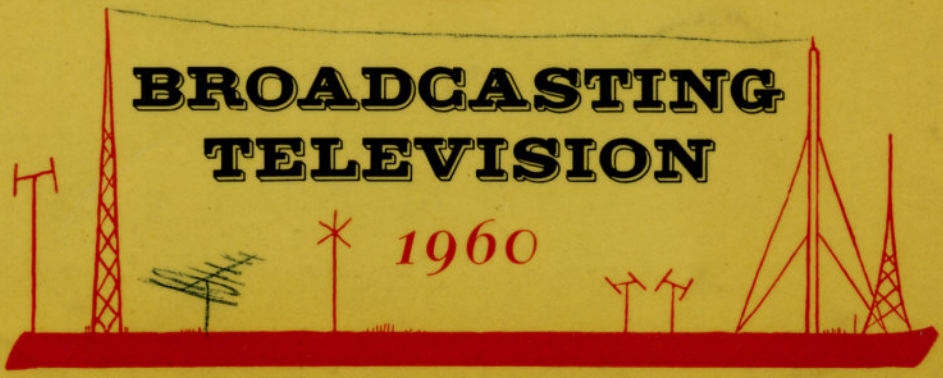
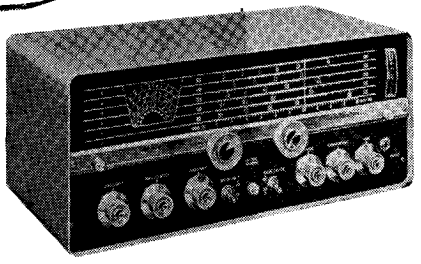
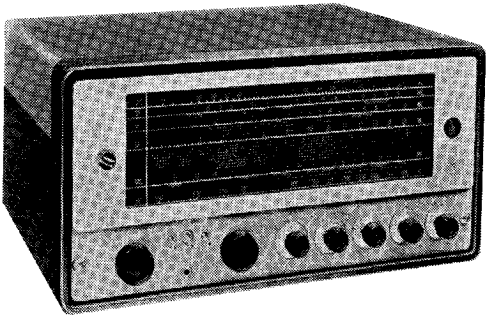
WORLD RADIO HANDBOOK

for listeners

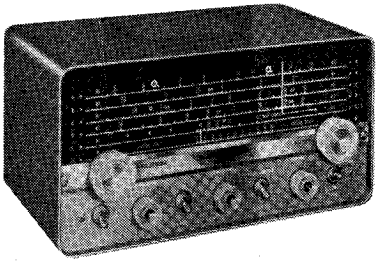




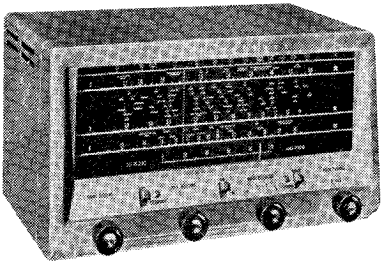
Model SX-110. The SX-110, an entirely new receiver in the medium price class, fills the need of the Amateur or shortwave enthusiast who desires features normally found only in higher priced units, such as an "S" meter with full vision vertical dial, antenna trimmer, and crystal filter. Housed in a functionally styled cabinet, the SX-110 is the leader in its field.
Frequency Coverage: Broadcast band 540-160 kc plus three shortwave bands covers 1550 kc-34 mc.
Power Source: 105/125 volts, 50/60 cycle AC.
Physical Data: Gray steel cabinet with brushed chrome trim. Size – 18¾" w., 8" h., 10¼" d, Shipping wgt. – approx. 32 lbs.



Model SX-62A. The SX-62A is the most versatile receiver available for listening to local broadcast, FM, or world-wide shortwave stations. Covering frequencies from 550 kc through 32 mc on amplitude modulated bands and from 27 mc to 109 mc on FM or AM bands, this unit in a single package makes available the largest number of commercial and broadcast stations of any receiver on the market. In addition, a 10-watt push-pull audio circuit, flat from 50 to 15000 cycles, permits reception of musical programs comparable with present-day high fidelity amplifiers.



Model S-107. For those requiring all-around frequency coverage including the 6-meter band at minimum cost. A compact unit, with up-to-the-minute cabinet design and full width slide rule dial. The latest refinements in electronic circuitry combine with an attractive cabinet to make this receiver a must in its class.
Frequency coverage: 5 bands covering 540 kc to 31 mc and 48 to 54.5 mc.
Power Source: 105/125 volts, 50/60 cycles AC.
Physical Data: Cabinet – gray steel with brushed chrome trim. Size 13¼" w., 6¾" h., 8¼" d. Shipping wgt. – approx. 18½ lbs.



MODEL S-38E. The current version of Hallicrafters' famous S-38 series combines an easily read full vision dial with attractive, functional case finished in gray, mahogany or blonde. New tube complement makes for even finer performance than its predecessors. The S-38E may be used on either 110 volts, 50/60 cycles AC or DC supplies, and a line cord adapter is available for use on 220-volt mains. For the shortwave enthusiast or the amateur desiring maximum performance at minimum cost, the S-38E cannot be surpassed.

For complete information on these and other world famous Hallicrafters receivers, write to Department WRH2

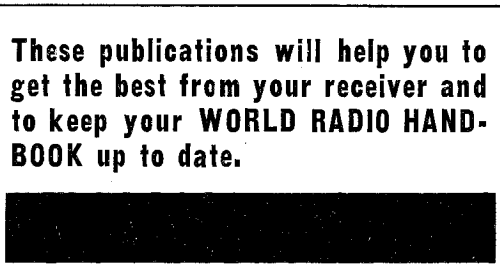
These publications will help you to get the best from your receiver and to keep your WORLD RADIO HANDBOOK up to date.



In June/July 1960 we can send you a supplement to WRH with corrections of the WRH 60, including summer schedules of the most important short wave stations all over the world. In order to be able to estimate the size of circulation, please send your order as early as possible. The price, including postage, will be: Dan. Kr. 5.00, £ 0/5/3, $ 1.00, DM. 3.25, Sw. Kr. 4.25.

will keep your WRH up to date. It is a valuable fortnightly supplement to the WRH, and contains the latest news from broadcasting stations all over the world, and thus enables you to keep the contents of the WRH up to date. Prices: Airmail: Annually: Da. Kr. 38.-, £ 2/-/-, $ 5.65, DM. 24.-, Quarterly: Da. Kr. 10.-, £ 0/11/0, $ 1.50, DM 6.50. Ordinary mail: Annually: Da. Kr. 22.-, £ 1/6/0, $3.50, DM 15.00. Quarterly: Da. Kr. 6.00, £ 0/7/0, $ 1.25, DM 4.25.

An invaluable companion to the WRH and a guide to better reception of medium waves, short waves, FM and television. Hints and tips by experienced world listeners in all parts of the world. This book contains numerous valuable articles for your hobby f. inst.: How to listen to FM and Television stations, to Amateurs, Time Signals and Weather Reports. How to learn languages by radio. How to build aerials. Articles for better understanding of radiotecnic etc. Prices: Da. Kr. 6.50, £ 0/6/6, $ 1.-, DM 4.00, Sw. Kr. 5.00 plus transport: Da. Kr. 0,65, £ 0/0/7, $ 0.10, DM 0.35, Sw. Kr. 0.50.

PREFACES

With the appearance of this – the fourteenth – edition of the World Radio Handbook I want to express my sincerest thanks to the understanding cooperation of the United Nations, Unesco, the European Broadcasting Union, Geneva, the International Broadcasting Organization, Prague, all broadcasting and television organizations and many individuals, radio clubs, radio firms, etc.

It is this interest in the purpose of the WRH: the promotion of understanding between the peoples of the world, that has made it possible to develop and improve WRH, making it a valuable link between the radio corporations themselves and between them and listeners in all countries; for this I feel deeply grateful. I trust that this valuable cooperation will continue and make it possible for WRH to keep touch with developments for the benefit of both parties. I hope for reception free of interference in the new year, in order that broadcasting can fulfil its real purpose: to be a means of knitting human beings together in a peaceful cooperation.

O. Lund Johansen.

CANADA:

J. ALPHONSE OUIMET
President,
Canadian Broadcasting Corp.

The place of radio and television broadcasting in the lives of people all over the world is so well established that little further need be said of the importance and the usefulness of these communications media. Much is being done both in the engineering field and the programming area of broadcasting, and the benefits of research and development are being enjoyed by millions of listeners and viewers. Because of the great size of a country like Canada, many of the problems of transmission over vast distances have always been a real challenge. The achievements of the Canadian Broadcasting Corporation in providing service to Canadians have been furthered very substantially through the work of engineers and technicians in other lands. It is our hope that many of the problems we have solved have helped others. It is this interchange of information which makes it possible for the whole broadcasting industry to make the strides it has been making in recent years. In forging closer links between broadcasting organizations, such reliable reference works as the *World Radio Handbook* play an increasingly vital role.

WLODZIMIERZ SOKORSKI
President,
Polskie Radio

POLAND:

Tall, slender towers of radio and TV transmitters are scattered all over the world. Antennas stick out over the roofs of the houses in large towns and in small villages. They are reached by the voice and the vision of the world. The idea of "provinciality" appears to be anachronic.

We are powerful. We have conquered Time - our words, spoken in one hemisphere are heard simultaneously in the other; we have conquered Space - and inhabitant of the capital of one country sitting in a cosy armchair in his home watches a TV programme, beamed from the capital of another country.

Our programmes inform, teach, entertain - they call forth meditation and smiles, tears of joy and happiness, sometimes —also tears of grief.

We must do all we can to make these powerful media serve only happiness and further development of mankind.

It is towards this end that we have to reinforce the co-operation between radio and TV organisations, to increase exchange of experiences and first of all—exchange of information and programmes of all kinds in so far as they make for better mutual understanding and acquaintanceship between the nations.

Polish Radio works alongside many of the radio and TV organisations in *the World Radio Handbook*, but we are always able to learn many interesting details about our old friends and acquaintances from it.

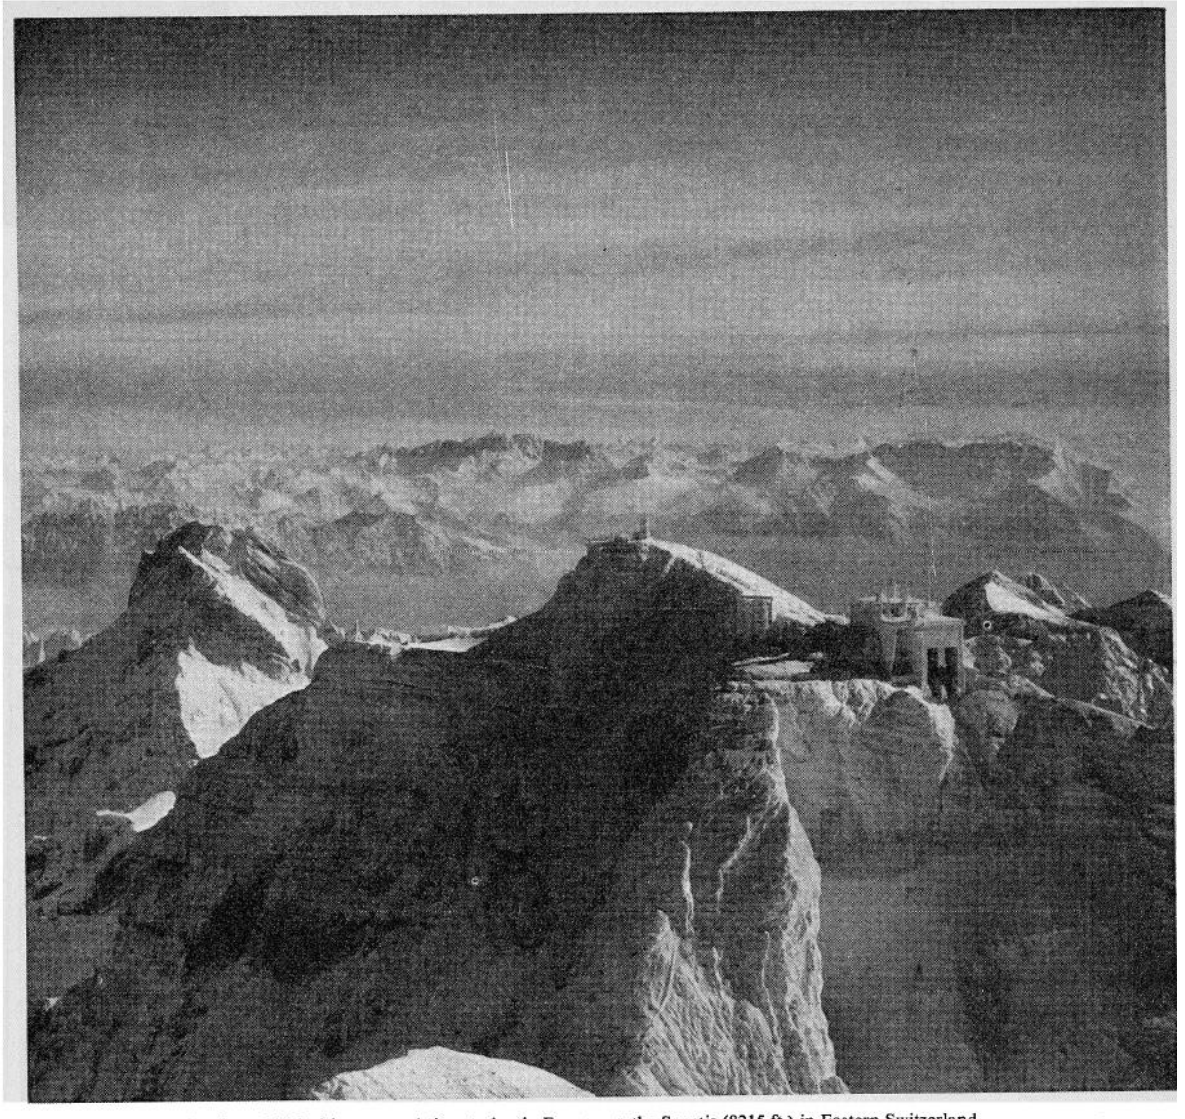
UNITED STATES INFORMATION AGENCY:

On behalf of the U.S. Information Agency, I extend sincere greetings to the WORLD RADIO HANDBOOK which effectively helps radio listeners evrywhere to find and distinguish the international broadcasts of all countries. We believe that every individual should have available a large number of sources of news and entertainment. The greatest safeguard to freedom of information is a multiplicity of sources. Democracy means that individuals make up their own minds, after hearing various sides of a question. The late Oliver Wendell Holmes, celebrated U.S. Supreme Court Justice, said it very well: "Let your ideas find their currency in the competition of the market place."

GEORGE V. ALLEN
Director,
U.S. Information Agency

Continued page 6.

SWITZERLAND CALLING...



The highest Radio and Television transmitting station in Europe on the Saentis (8215 ft.) in Eastern Switzerland

The mountains live! In its overseas programmes 1959/60, SBC presents a series on "The Mountains of Switzerland". You can also hear actuality features, magazine programmes, a weekly DX Corner, as well as news, commentaries, music and light entertainment (see detailed programme schedule on page 91)

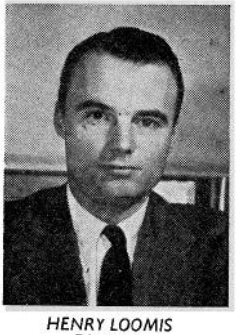
For free, illustrated programme booklet write to the Swiss Shortwave Service, Berne, Switzerland

UNITED NATIONS:

W. GIBSON PARKER
Director, Radio and Visual Services Division
United Nations

Today, despite the conflicts and tensions which are generated in international life, and which consume so much of our time and energy, it is possible to detect the beginning of what Mr. Dag Hammerskjold, the Secretary-General of the United Nations, has called "a new Synthesis . . . progress in the direction of a human community which, while retaining the special character of individuals and groups, has made use of what the various branches of the family of man have attained along different paths over thousands of years". In short—individual diversity strenthened and protected by a living sense of interdependent unity.

We, in United Nations Radio and Television get a feeling of deep satisfaction in making our modest contribution towards this progress this uniquely twentieth-century evolution. Whether the programme is a factual report on the debates in the General Assembly or a documentary exploring the broad social and economic issues of our time, we strive to communicate this sense of essential unity. We believe that it's not only worthwhile but imperative, and we value greatly the cooperation we receive from so many of the broadcasting organisations listed in *The World Radio Handbook*. The links we have established with them over the years are, in themselves, evidence of the "new synthesis". As also, indeed, is the service the *World Radio Handbook* provides.



HENRY LOOMIS
Director,
Voice of America,
U.S. Information Agency

UNITED STATES, VOICE OF AMERICA:

Of major importance to broadcasters evrywhere is the development of the transistor radio. In many areas of the world, electricity is still a rarity. The transistor radio has leaped this barrier to communication. The number of short-wave listeners has increased and will continue to increase enormously because of the availability, the cheapness and the ease of maintenance of this receiver. In areas where distance has isolated the individual, the outside world has suddenly become a reality. News, ideas, music, drama, commentary are spilling into his home.

And broadcasters from all over want to have a part in bringing their points of view to the ears of this vast new audience. WORLD RADIO HANDBOOK plays its role informing the listener about the wide variety of programs he has to choose from. Hours of broadcasts are expanding. Higher powered transmitters are being built. More broadcasts in indigenous languages are being beamed abroad. New countries are engaging in external broadcasting.

This is all to the good. Responsible broadcasting is an important bridge to understanding other peoples' language, culture and customs. Such an understanding is vital if the world is to build toward a secure peace.

UNITED STATES, OFFICE OF EDUCATION:

The stimulating influence of free broadcasting over the developing world present a vivid picture in the Geophysical Year which we have just completed. The results of the achievements in art and science and music, alone serve as a contribution to the Living Present, which can be analyzed through communication between and among the civilized nations of mankind. That such an era has now come about should make us eternally grateful and humble in the presence of Almighty God "from whom all blessings flow". It is to such publications as represented by this book and to its redoubtable and courageous Editor, O. Lund Johansen that we owe an additional debt of gratitude for making it possible for us to realize the extent and purpose of world-wide broadcasting. This is, at once, a record and a reference that we, as broadcasters, cannot do without.

FRANKLIN DUNHAM, Chief, Radio-Television, U.S. Office of Education

---

The Editor of the World Radio Handbook seeks information from all stations engaged in broadcasting and interested in international broadcasting and publishes the information as communicated to him by the stations. The Editor cannot be held responsible for the correctness of this information or for not publishing schedules and other particulars of stations which do not supply the information or for changes in the times and wavelengths of programmes made after the current edition has gone to press.

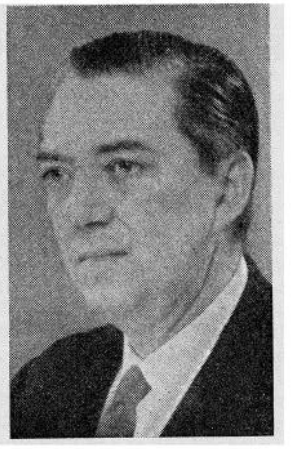
By José Garza y de Garate, Acting Chief, Radio Division, UNESCO.



José Garza y de Garate

The future of sound radio is a theme which has always featured prominently in the minds of administrators and operators and in the past few years, with the advent of television, many have feared that the newcomer was destined to take over the entire field of broadcasting. But even the gigantic strides taken by TV during the past few years cannot belittle the latest statistics on radio which, even in countries where television is widespread, show a constant increase in the sale of radio receivers.

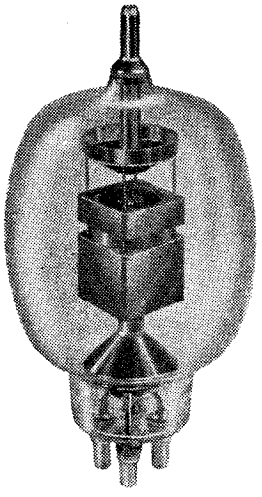
In a majority of countries to-day, radio is still far from reaching the saturation point. It is calculated that there is a potential market for over 350 million receivers, provided these can be supplied at prices compatible with the economic standards of the needful countries. This is a challenge which several international organizations, including Unesco, are trying to meet, and it is not excessive to say that radio may soon become the greatest purveyor of information and ideas that the world has ever known.

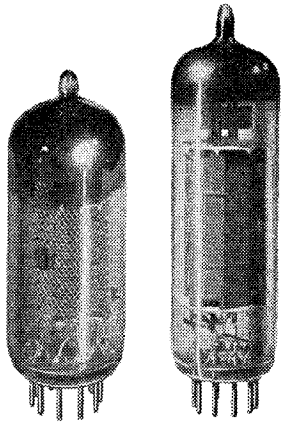
But this is only one of many barriers which stand in the way of a fuller development of radio as a means of international mass communication. Some of these barriers are man-made; others are the product of ignorance, misunderstanding or prejudice. What man has done, he can undo, and what he ignores he can learn. It is to the interest of nobody that stations interfere with each other's broadcasts, but the road to an equitable and fair distribution of wavelengths is long and encumbered by false interests that only the light of sober discussion can dissipate.

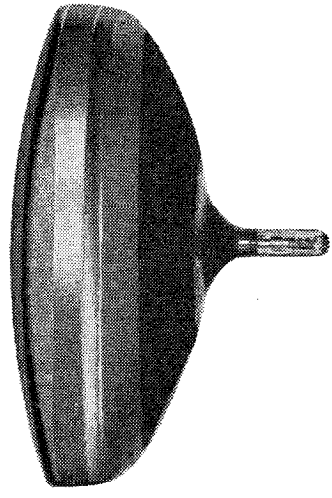
And yet, the progress already made is most encouraging. The practice of international programme relays is becoming common practice among friendly nations. Transcriptions continue to flow in ever larger quantities from one part of the world to the other. Because of the still inadequate short-wave international services, the recorded programme continues to be the best international means of mass communication, but much is yet to come.

One encouraging feature in the vast tangled flow of international broadcasting is that many countries which were previously on the "receiving" end are now beginning to "talk back". This, of course, makes the problem of orderly distribution of wave-lengths all the more intricate, but it is a healthy note that two-way communications, even at this rudimentary and unsatisfactory stage, have been established. The often voiced ideal of "people speaking to people" may thereby one day become a reality.

In 1956 Unesco launched a major project to promote the mutual understanding of cultural values between the Orient and the Occident. This project has now found expression in several concrete priority enterprises in which the mass media, and particularly radio, play an important role. At present, special attention is being given to the exchange af radio personnel and materials to foster a better understanding of each other's audience reactions. This should prepare the ground for the day when long distance broadcasting takes on the task of clearing the road to international understanding and good will with constructive programmes that foster the universal desire for peace. *The World Radio Handbook*, which for the past fourteen years has been bringing an invaluable element of order into the vast field of international broadcasting, is, we believe, *destined to become an indispensable source of information, and of constantly greater value to broadcasters and listeners alike.*

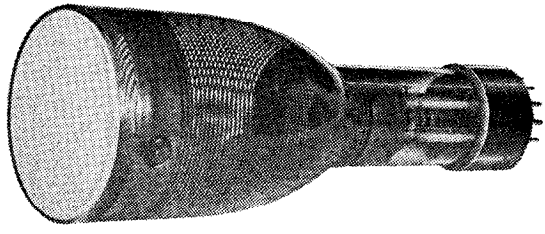


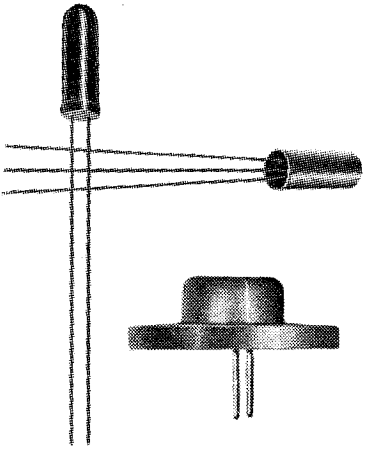




PHILIPS

electron tubes and semi-conductors





Philips manufacture a complete range of electron tubes, from the smallest battery-fed subminiatures to giant transmitting tubes for broadcasting and industry; from electrometer tubes handling extremely small currents to heavy duty ignitrons, from tiny phototubes to 300 kV X-ray tubes.

In the fast growing domain of solid state electronics Philips are contributing on an ever increasing scale to the progress and development of semi-conductors. A complete range of diodes and transistors for the whole field of applications is available.

SHORTWAVE RADIO CONDITIONS DURING 1960

T. W. Bennington, Research Dept., BBC, England.

In shortwave radio transmission it is necessary to change the wavelength used so as to suit the conditions prevailing in the ionosphere over the transmission path. This is because the wave travels from transmitter to receiver by successive reflections at the ionosphere and at the ground, and, owing to the fact that the ionosphere is produced by the sun, conditions within it continually change, with time of day, season of the year and over the 11-year period of the sunspot cycle. When the ionisation of the ionosphere is at its highest level, as at sunspot maximum, the shortest wavelengths in the shortwave bands are of most use, but when the ionisation level falls, as it does towards sunspot minimum, longer wavelengths within that band must be used.

It is now practically certain that sunspot maximum occurred at the epoch February/March 1958, for since then the average sunspot activity has been slowly decreasing. That is what usually happens after the maximum of a sunspot cycle with a high maximum like the present one, for in such cycles the decrease from maximum to minimum is much slower than the increase from minimum to maximum. But one can never tell wether or not secondary increases in the average activity are going to occur.

However the likelihood is that the average activity will go on decreasing – perhaps with some fluctuations – until about 1965, and that during the period from now until then the wavelengths of most use for shortwave broadcasting will gradually become longer, for any given transmission path at any particular time of day and season of the year.

But, as has already been indicated, the transition from the shorter to the longer wavelengths is likely to be a slow one, and, certainly, the decrease in sunspot activity since the maximum has, up to now, been but small. And it is unlikely that the sunspot number, which at the maximum was about 200, will be much below 110 at the end of 1960.

Even so, it is probable that during the year some small changes in the wavebands used will be found efficacious in maintaining the broadcasting services. It is not possible, in this short article, to deal with these for a large number of circuits, but the Table may be helpful in indicating the probable best wavelengths for three directions from Europe or vice versa, for good reception during different months and times of day. It is possible that, for only a part of each period shown, the next shorter waveband may also give good reception, and also the next longer. For short distances in the same directions the next longer wavelength will probably be best, but provided the distance is greater than 4000 kilometres the wavelengths shown should be usable. During the times not shown the best waveband should be one of these between those given for the nearest times, except during the early morning, when it is likely to be the next **longer** waveband to those given for the night period.

As will be noticed from the Table the best daytime wavelength is likely to change from the 11-metre to the 13-metre waveband during the summer months, and, for the North American circuit, to be in 19 and 16 metre bands during the summer months, and in the 13 metre band during the following autumn and winter. As to the evening and night-time wavelengths, these have some rather complex seasonal variations, but also a tendency to change towards a longer wavelength at the end of the year than at the beginning.

Thus it is probable that at the beginning of 1960 the shortest wavelengths – such as are being used at present – will be of the most use, but that, from the summer onwards there will be a definite tendency for the next longer wavelengths to be best, at least over parts of the daily periods during which the shorter wavelengths are being used at present.

Shortwave conditions do not, of course, always remain uniform from day to day even over a short period of time, but are subject to periods of disturbance. At these times streams of corpuscles, which are emitted from eruptions on the sun, arrive in the earth's vicinity and, passing within the ionosphere, they upset its electronic structure and so impair its properties as a reflector of short waves. At the same time they cause displays of the polar aurorae and disturbances to the earth's magnetic field. During such periods, therefore, radio reception over long distances may fall below its normal standard, and, though it cannot be restored to normal by any action on the part either of the listener or the broadcasting authority, there is the possibility that, as a temporary measure, better reception may be obtained on a somewhat longer wavelength than the one on which it is normally obtained.

GATES BROADCASTING EQUIPMENT

GATES is the largest supplier of AM radio broadcasting equipment in the U.S.A. The prime reason for GATES' popularity everywhere, is that while maintaining the highest standards of Quality, GATES equipment is always competitively priced—and equally important, costs less to install and to operate. Why not write today for descriptive literature and engineering data on this modern GATES equipment.

A full line of AM &.FM broadcasting, television and communication transmitters from 250 watts to 50 kw.

● Speech Input Equipment • Transmitter Control Consoles • Master Control Consoles • Speech Input Consoles • Plug-In Preamplifiers • General Purpose Consoles • Transcription Turntables • Mobile Sound Effects Console • Automatic Programming Equipment.

● Remote Amplifier Equipment • Directional Phasing Equipment • Monitoring Equipment • Oscillators • Remote Control Equipment.

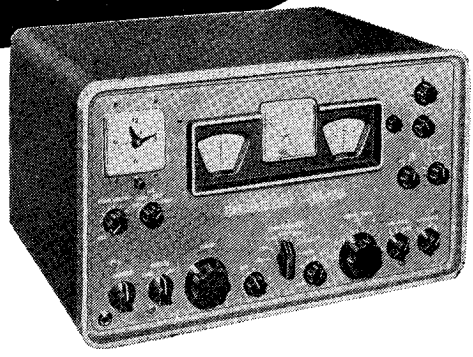
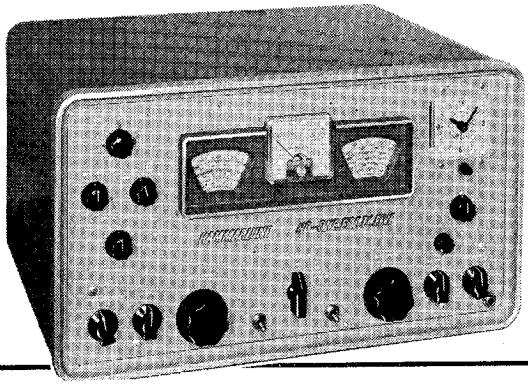
YOUR BEST BUYS...
in Communications Receivers



HQ-180

Entirely NEW, general coverage receiver offers optimum SSB reception. Continuously tunable from 540 KCS to 31 MCS.
A 17-tube, triple conversion superheterodyne circuit with automatic noise limiter.
Automatically adjusts audio response to fit receiving conditions.



HQ-145

Unparalleled value! Compare the HQ-145 with other receivers — and nowhere will you find a general-coverage receiver offering the performance or built-in quality of this unit. An 11-tube superheterodyne featuring dual conversion. Continuously tunable from 540 KCS to 30 MCS in 4 bands. Automatic noise limiter. Both crystal filter and notch filter for unlimited tuning techniques.

HQ-170

The finest amateur receiver on the market.
A 17-tube, triple conversion superheterodyne circuit with automatic noise limiter. Linear product detector for CW and SSB reception plus normal diode AM detection. Automatically adjusts audio response to fit receiving conditions. Full dial coverage of 6, 10, 11, 20, 40, 80 and 160 meter amateur bands.

Established 1910

Write today for full details and illustrated literature on these and other Hammarlund Communications Receivers.

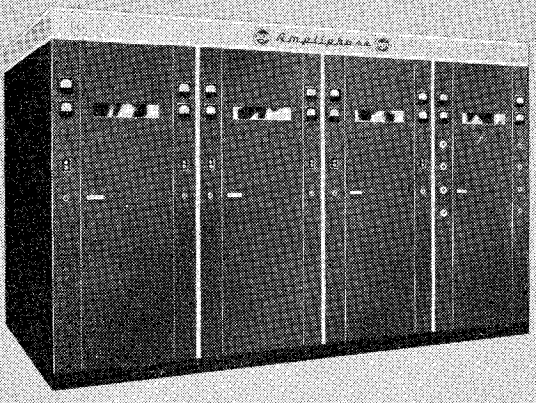
World-Famous for Proven Reliability and Performance

RCA SHORT-WAVE and MEDIUM-WAVE TRANSMITTERS



BTA-50G, the new RCA 50 KW AM "Ampliphase" transmitter, represents the most significant step since RCA introduced high-level modulation. It occupies half the floor space required by other 50 KW transmitters, cuts installation and operating costs, eliminates need for underfloor trenches, costly water cooling systems or external blowers. All components are easily accessible and can be quickly replaced.

Since its formation in 1919, Radio Corporation of America has been in the forefront of major advances in radio communications of every type. In virtually every corner of the globe RCA short-wave and medium-wave broadcast transmitters are providing day-in, day-out dependability under all extremes of climatic and operational conditions.

As the producer of the finest in transmitters, its experience in the radio industry is unparalleled.

At its research and engineering laboratories, RCA engineers conceive and develop the most advanced and improved circuits and mechanical components.

New RCA electron tubes and semi-conductors are being developed and produced to meet the changing needs of the entire industry, as well as specific RCA equipment.

For over a quarter of a century, RCA scientists have provided a constant flow of technical knowledge to the expanding radio and electronic industry ...and products, facilities, and services to the world.

The RCA monogram is universally recognized as a symbol of the radio age, that has brought new pleasures in entertainment, new techniques of communication, and new opportunities to millions of people throughout the world. It is a mark of quality and superior craftsmanship.

RCA broadcast transmitters have proven their economy and dependability in many years of long service for many types of broadcasters, such as the National Broadcasting Company network, the Finnish Broadcasting Company, Radio Pakistan, Radio Istanbul, and hundreds of private broadcasters.

RCA short-wave communications transmitters are preferred by many governmental and private communications organizations. Transmitters up to 1.2 megawatts of output have been built by RCA, and are used around the world to provide every type of radio communications.

For the best investment in short and medium-wave transmitters see your RCA Distributor or write to Dept. ...N-3 RCA International Division, Radio Corporation of America, 30 Rockefeller Plaza, New York 20, N.Y., U.S.A.

THE DANISH INVENTION FROM 1887 STILL A LEADER IN THE WORLD MARKET

Hellesens make about 100 million dry batteries annually in 200 different, internationally demanded types. – The main part of the production is exported to no less than 72 countries all over the world. Hellesen's has gained worldwide renown as being the most reliable and most economic dry battery – a product of high quality and constant uniformity.

TABLE OF THE MOST SUITABLE METRE BANDS

FOR BEST SHORT-WAVE RECEPTION IN EVERY PART OF THE WORLD AT VARIOUS TIMES OF THE DAY IN 1960.

Note: The figures in the table below are calculated for a specific point within each area as indicated on the chart below. The area numbers on the chart refer to the numbers indicated in the left-hand column of the table.

The figures in the table can be regarded only as average figures, as conditions will vary considerably from time to time due to irregularities in the ionosphere.

Example: A listener located in the eastern part of No. Am. (area 3) wishes to hear a station in the so. part of Af. (area 8) on a Jan. evening (21 local time). By following the horizontal column of figures starting at No. Am., East, on the left until it meets the vertical columns under the area no. 8 in the section for the months Nov., Dec., Jan. and Feb. on the right, he will come to the figure 25. This means that the 25 m. b. is the most suitable for listening to the required station at that time.

The listener's area	Local time	Area of the transmitting station																																	
		May June July August											March April Sept. October											Nov. Dec. Jan. Feb.

Somewhat higher wavelengths must probably be reckoned with towards the end of year 1960. The reason for this uncertainty must be sought in the fact that the recent sunspot maximum was reached after an unprecedented steep rise over about one year, so one cannot exclude the possibility that the sunspot number will show an equally unusual decrease within the next year.

a single source of supply THAT SOLVES YOUR TECHNICAL PROBLEMS . . . AND SAVES YOU MONEY

COMPLETE COMMUNICATIONS OR BROADCASTING SYSTEMS — REGARDLESS OF SIZE OR APPLICATION.

ROCKE INTERNATIONAL acts as either the international division or the export representative of more than twenty-five American firms who manufacture equipment ranging from microphones and klystrons to complete broadcasting stations.

In addition to offering this equipment, Rocke International has broadened its services to include specifications of all related equipment, design of special equipment and complete systems, local surveys, supervision of installations and even the design and supply of buildings to house a broadcasting station or communications operation.

Rocke International Systems Include:

- **COMMUNICATION**
- **BROADCAST**
- **TELEVISION-BROADCAST**
- **TELEVISION-INDUSTRIAL**
- **AUDIO EQUIPMENT**
  (tape recorders, microphones, loudspeakers, etc.)

With full assortment of products in these fields, Rocke International can meet your complete requirements. Purchasing from one source keeps your procurement costs at a minimum, speeds delivery and establishes a single commercial and technical responsibility.

For further information, catalogs and prices write to:

INTERNATIONAL RADIO AND TELEVISION ORGANIZATION – OIRT

Addr.: 15, Liebknechtova, Prague 16, Czechoslovakia. **Cable:** Interadif, Praha.

Nature: International organization dealing with practical and theoretical questions connected with broadcasting and television prgr's and technique and co-operation between broadcasting and television organizations.

Governing Body: General Assembly consisting of one representative for each active member.

ADMINISTRATIVE COUNCIL: Consisting of 7 to 13 members. Chairman for 1959/60: P. Kito, President of the Albanian Broadcasting Organization.
Vice-Chairmen for 1959/60: Representatives of the Radio and Television Organizations of the Byelorussian SSR and the Chinese P.R.
Members: Representatives of the Radio and Television Organizations of the P.R. of Bulgaria, Czechoslovak Republic, Hungarian P.R., PDR of Korea, and USSR.

MEMBERS: Radio and Television Organizations of: The PR of Albania, Byelorussian SSR, PR of Bulgaria, Chinese PR, Czechoslovak Republic, United Arab Republic/Egypt/, Estonian SSR, Finland, German Democratic Republic, Hungarian PR, Iraq, Korean People's Democratic Republic, Latvian SSR, Lithuanian SSR, Moldavian SSR, PR of Mongolia, PR of Poland, Rumanian PR, Ukrainian PR, Union of Soviet Socialist Republics, PDR of Vietnam.

Facilities: Administrative office and Technical Centre, Prague, Czechoslovakia.

Specialized Commissions: Technical Commission: Chairman A. V. Ivanov, USSR; Programme Commission: Chairman H. Werner, Polish P.R.; Television Commission: Chairman H. Adameck, German Democratic Republic.

Publications: Documentation and Information Bulletin in English, French, Russian and Chinese, issued every two month. Technical documentation and List of Broadcasting and Television stations in operation. Monthly OIRT Information, and quarterly Catalogues of prgr's suitable for exchange: a) radio, b) television.

Meetings: General Assembly every two years, Administrative Council every one year.
Relations with all important organizations active in the field of radio and television.

ASOCIACION INTERAMERICANA DE RADIODIFUSION (AIR):

AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 4000 broadcasting and 400 television stations. Its purpose is to preserve free and stable broadcasting, promote cooperation between broadcasting corporations and the public authorities, to raise the cultural level of the peoples, to work for the preservation of freedom of utterance and instruction and a closer feeling of association between the private broadcasting corporations on the American Continent. AIR has energetically represented to the Argentine Government that all transmitters be immediately returned to private ownership. AIR has agreed with Sociedad Interamericana de Prensa about the revision of the so-called Panama Doctrine for the purpose of increasing the practical effectiveness of that pact and of making it a permanent means of defence for the preservation of democratic principle. AIR is recognized by the United Nations and collaborates with UNESCO, with the International Union of Telecommunications, with the organizations of the American States. AIR has subscribed to the "Panama Doctrine" in which the American Radio and Press declare themselves united against any attack on individual liberty and any restriction of the freedom of utterance. During the current year the institution has had intensive activity in defense of freedom of information in connection with events occurring in several countries.

The sixth General Meeting was held in October in Mexico City and important decisions were taken in regard to broadcasting legislation. AIR's President is the Uruguayan Broadcaster Sr. Raúl Fontaina, and the Director General, Sr. Julio Menadier Carrasco of Chile. The address of the President is Mercedes no. 973, Montevideo, Uruguay, and that of the Central Office, Casilla 10476, Santiago de Chile. **Cable:** AIR, Santiago, Chile.

UNESCO

(United Nations Educational, Scientific and Cultural Organization)
Radio Division, Department of Mass Communication.
Acting Chief: José Garza y de Garate.
Chief of English Production: Rex Keating.
Chief of French Production: Fernand Pouey.
Chief of Spanish Production: José Garza y de Garate.

BROADCASTING FOUNDATION OG AMERICA

The Broadcasting Foundation of America is organized as an educational corporation. Its object is to foment the exchange of Radio and Television programs of cultural and informative nature between the main stream of broadcasting in the United States, and the broadcasting stations and organizations of other countries. American radio station membership with BFA has grown to a present total of 180 stations broadcasting music and spoken word programs that enable the people of the United States to listen directly to the peoples and cultures of the rest of mankind. The number of countries willing and able to produce programs in English for BFA has been surprising.

The BFA is an associate member of EBU. It attends the annual OIR convention as an observer, and is represented at the Asian Broadcasting Meeting and UNESCO meetings on program exchange. It is the official American organization for selecting and presenting entries to the Prix Italia.

In the television field BFA is at present actively exploring the different production and financial implications of television with a view to entering this field on the most appropriate international basis in the coming year.

Chairman: Dr. Samuel B. Gould, Chancellor of the University of California, Santa Barbara.

President: George E. Probst.

Executive Director: Basil Thornton.

STANDARD HANDBOOKS ON RADIO AND TV

New!

TV ANTENNAS

Describes how to build TV and FM antennas for all channels.
By F. Rydström, O. Engelstoft, and I. Fialla.

Explains *all problems* connected with TV and FM antennas and TV reception and with how-to-make-it articles dealing with *TV and FM antennas for all channels.* Sections on wave propagation, TV antennas in theory and practice, FM antennas in theory and practice, window and balcony TV antennas, matching, feeders, shortwave transformers, TV antenna installation, TV antennas for community installations. Has separate section on special subjects such as: Matching a balanced TV antenna to a balanced feeder, matching a balanced TV antenna to an unbalanced feeder, influence of parasitic elements on dipole impedance, stacked arrays, DX TV reception etc.

Price: Da. Kr. 12.75, £ 0/13/6, $ 2.-, DM 9.00, Sw. Kr. 9.75 plus postages: Da. Kr. 1.20, £ 0/1/3, $ 0.20, DM 0.75, Sw. Kr. 0.50.

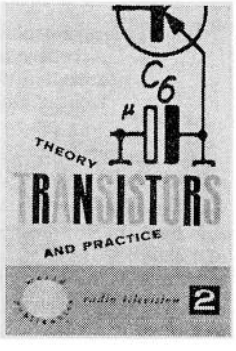
New!

HOW TO IMPROVE YOUR SHORT WAVE RECEPTION

A practical handbook for short wave enthusiasts who wish to know all about short wave reception, the technical aids and means of improving it, and who wish themselves to build short wave receivers or means to improve short wave reception such as an effective short wave antenna, pre-selector etc.

Prices: Da. Kr. 12.50, £ 0/13/6 $ 2.00, DM 9.00, Sw. Kr. 9.75 plus postages: As for: How to build TV-aerials.

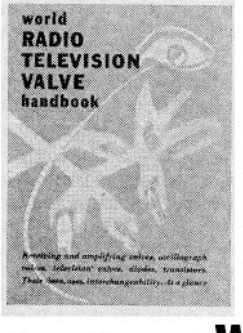
TRANSISTORS - theory and practice



An up to date and »how to build« handbook, which in an easy understandable manner and in a new way explains:

The theory of transistors. The choice of working-point and its stabilisation. The design of RC-coupled amplifiers and output stages. Practical circuits with indication of suitable component values. A survey of data on practically all existing transistor types. A practical handbook, which will satisfy all technicians and amateurs, who want in an easy way to obtain a theoretical and practical knowledge of transistor technique, and who want also to do practical work.

Prices: Da. Kr. 9.75, $ 0/9/6, $ 1.50, DM 6.00 plus postages: Da. Kr. 0.60, £ 0/0/8, $ 0.10, DM 0.50, Sw. Kr. 0.50.



WORLD RADIO TELEVISION VALVE AND TV HANDBOOK

gives the radio and television technician and the radio and television engineer at a glance the correct answer to any practical question concerned with receiving and amplifying valves, television, and cathoderay valves, crystal diodes, and transistors of any make. DATA, REPLACEMENT or SUBSTITUTE VALVES, CLASSIFICATION, BASE AND PIN CONNECTIONS.

Prices: Da. Kr. 13.50, £ 0/13/6, $ 2.00, DM 9.00, Sw. Kr. 9.75, plus postages: As for: How to built TV-aerials.

Obtainable from: **WORLD RADIO - TV PUBLICATIONS**

Lindorffs Alle 1, Hellerup, Denmark
and the representatives mentioned on page 01 and from booksellers

HOW EUROVISION STANDS TODAY

1. October 1959

A BRIEF SURVEY

The Eurovision Network now covers twelve countries: the total length of the radio links is about 15000 km.

Sixteen Services are able to exchange television programmes on this network. They are the following:

Left: G. HANSEN, Director of the E.B.U. Technical Centre. Right: M. J. L. PULLING, Controller, Television Service Engineering of the British Broadcasting Corporation and chairman of Working Party L of the EBU.

Austria: Oesterreichischer Rundfunk

Belgium: Institut National Belge de Radio-diffusion (French-speaking)
Belgisch Nationaal Instituut voor Radio-Omroep (Flemish-speaking)

Denmark: Danmarks Radio

France: Radiodiffusion-Télévision Française

German Federal Republic: Arbeitsgemeinschaft der Rundfunk-anstalten der Bundesrepublik Deutschland

Luxembourg: Compagnie Luxembourgeoise de Télédiffusion

Monaco: Radio Monte-Carlo

Netherlands: Nederlandse Televisie Stichting

Sweden: Sveriges Radio

Switzerland: Schweizerische Rundspruch Gesell-schaft (German-speaking)
Société Suisse de Radiodiffusion (French-speaking)
Televisione Svizzera Italiana (Italian-speaking)

United Kingdom: British Broadcasting Corpora-tion. Independent Television Authority

Eurovision programmes can also be transmitted to Finland and Yugoslavia, but the Network does not yet allow contributions to be made to Eurovision by Oy. Yleisradio or by the Jugoslovenska Radio-difuzija. The Norsk Rikskringkasting (Norway) can be connected to the Network for special occasions.

Exchange of programmes is also possible, and has in fact been effected a few times, with some countries of Eastern Europe: Czechoslovakia, Eastern Germany, Poland and Hungary. Programmes could also be transmitted to the U.S.S.R. via Finland, but not in the opposite direction.

A programme has been fed to the Eurovision Network from Algiers across the Mediterranean by means of a high-flying aircraft equipped with a radio relay station. Pictures from the United States have also been fed over the Eurovision Network using the so-called Cable Film process—that is, transmitting a short film sequence at slow speed over the Transatlantic telephone cable. There is of course a time delay, but this can be reduced to a few hours.

On an average there are five or six Eurovision transmissions per week, coordinated by the E.B.U. (not taking into consideration the many exchanges that take place between neighbouring countries, which do not need coordination). The average participation in each of these transmissions is seven or eight Services per transmission.

The Eurovision exchanges are organised by the E.B.U. as follows. The programme coordination is effected by the Administrative Offiice at Geneva and the technical coordination by the Technical Centre in Brussels, where a specially equipped International Technical Coordination Centre (C.I.C.T.) exists for this purpose. The problems arising from the Eurovision exchanges are dealt with by the Groupe Télévision 2 (known as GTV/2) on the programme side, and on the technical side by Working Parties L (International television relays) and M (Long-distance television transmission). Working Party L deals with the operational aspects, and is a joint sub-group of the European broadcasting and P.T.T. engineers, while Working Party M studies the purely technical aspects, such as test signals, standards converters etc.

The Network will certainly expand in the years to come, notably to enable Eurovision transmissions to be made from Norway, Finland and Yugoslavia, and also to include Spain, Portugal and possibly North Africa. At the same time it is possible that the Network will be used more extensively, for instance for a scheme of daily news-film exchanges, for which trial periods have already been held.

Listen! Every sound recorded lifelike on SCOTCH Brand Magnetic Tapes

The whisper of muted violins or the mighty crash of cymbals—you hear them both and all between with brilliant fidelity when they're recorded on "SCOTCH" Brand Magnetic Tape.

Now there are four famous "SCOTCH" Brand tapes to choose from: popular No. 111 Tape for low-cost recordings; High Output Tape No. 120 for fullest dynamic range sound; Extra Play Tape No. 190 for 50% extra recording time on a single reel, and new Extra Play Tape No. 150 offering as much recording time as 1½ reels of conventional tape, made with polyester backing for stability in any climate, any temperature.

For helpful, free booklet, "Properties of Scotch Magnetic Tapes" write Minnesota Mining and Manufacturing Co., International Division, 900 Bush Avenue, St. Paul 6, Minn., U.S.A.

"SCOTCH" Brand Magnetic Tapes, like the thousands of other products made by Minnesota Mining and Manufacturing Company, are designed to meet the highest standards of performance. A program of continuous research insures the highest quality as well as a constant flow of new products. Good reasons to *always* look to 3M—*first*.

RECEPTION OF TELEVISION AND V.H.F. TRANSMISSIONS

T. W. Bennington, Research Dept., BBC, England.

On frequencies greater than about 40 Mc/s (wavelengths shorter than about 7.5 metres) the radio energy normally penetrates through the ionosphere without reflection, and so is not returned to the earth at long distances. The transmitted signals are therefore only received at relatively short distances, although, as will be seen later, various conditions can arise which sometimes permit them to be received at much greater distances.

But under normal conditions reception is obtained by utilising waves which pass from transmitting to receiving aerial just above the ground, both directly and by reflection at the ground. Thus, it might be supposed that, because of the curvature of the earth, the distance range for reception would be limited to the straight »line of sight« of the receiving aerial from the transmitting aerial. But there are two effects which modify this conception. Firstly there is some diffraction or »bending« of the radio wave around the curve of the earth so that a limited amount of energy penetrates into the »shadow« zone by this means, though, of course, not so much energy reaches this zone as would be the case if the curve in the earth's surface were not present. Secondly the direct wave does not travel between the two aerials in a perfectly straight line, but, because of the variation in atmospheric pressure, temperature and moisture content with height above ground, it is refracted so as to follow a slightly but continuously curving path. The result of this is that the »radio horizon« is extended somewhat beyond the straight line horizon and a usable signal is received somewhat further than would be the case if the path were a straight line. The distance at which a signal is receivable depends, in fact, critically upon the height of the transmitting and receiving aerials and upon the power radiated, and also, to a smaller extent, upon the frequency, the polarization (i.e. vertical or horizontal) and the nature of the terrain (i.e. whether smooth or mountainous). The strength of the signal also varies considerably between the receiving locations in any given area, so it is usual, in specifying received signal strength, to state the percentage of receiving locations to which this applies.

The Table gives a rough idea of the maximum distances at which a good signal could be expected in normal atmospheric conditions in a quiet country site, with a receiving aerial 10 m above the ground, for different transmitter powers and aerials heights. It applies to 50% of the receiving locations for 50% of the time, is for a non-mountainous land path, and is approximately applicable over the v.h.f. band and for vertical or horizontal polarization.

APPROXIMATE MAXIMUM DISTANCES FOR GOOD VHF RECEPTION

Power	Transmitting Aerial Height 200 m	Transmitting Aerial Height 400 m
	Distance (km)	Distance (km)
10 kW	90	110
50 kW	110	130
100 kW	120	140
500 kW	150	170

So much for reception under »normal« conditions. We will now consider the effects which give rise to v.h.f. reception at greater distances.

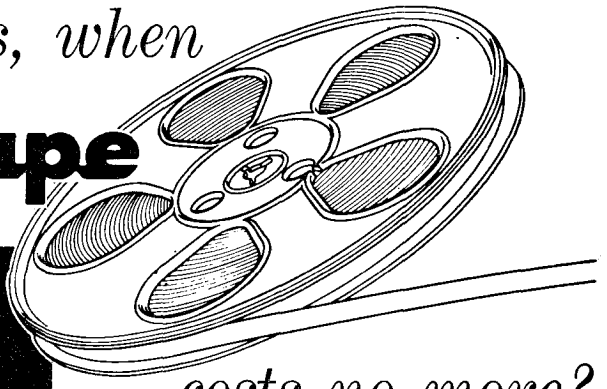
Firstly it is possible for transmissions in the v.h.f. band to be propagated over long distances by reflection of the waves by the regular F_2 layer of the ionosphere. This will only happen during times when the ionisation in that layer is at an exceptionally high level, and is therefore confined to the years near sunspot maximum, and is unlikely to occur at all in years when the sunspot activity is low. During the years when it does occur it is only likely to happen during the daytime, and more particularly during the equinox and winter than during the summer. The lower frequencies in the v.h.f. band are more subject to this type of propagation than are the higher ones, and it is unlikely to occur on frequencies above about 60 Mc/s. Signals propagated in this way may be received at great distances, often as far as 12,000 km and occasionally even further. Though sound signals may be well received by this means it is unlikely that good picture reception will occur for any length of time, owing to instabilities in the ionosphere.

Secondly, v.h.f. reception can occur over distances between about 800 and 2300 km by reflection by highly ionised patches in the E layer of the ionosphere, known as Sporadic E. This is likely to occur not only at sunspot maximum but during any year, but only during the local summer months (May to September in the northern hemisphere). During these months it is much more likely in daytime than at night, though not regularly and for long daily periods, but rather at odd times during some days, and lasting perhaps for from half-an-hour up to a few hours. The lower v.h.f. frequencies are most likely to be received in this way, but those up to about 100 Mc/s may be propagated occasionally. Sound reception can be quite good in this type of propagation and even picture reception may be fair for short periods. Such reception is unlikely to be obtained from distances much greater than that given above.

Continued page 39

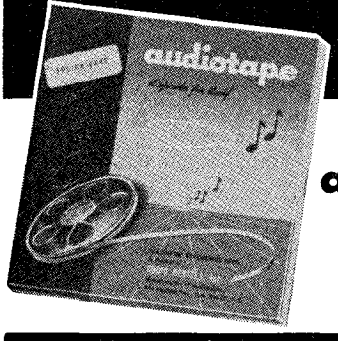
why settle for less, when

audiotape



costs no more?

AUDIOTAPE has:
excellent response at high and low frequencies – assures most faithful reproduction of all sounds, exceptionally low background noise; unequalled uniformity of output – guaranteed not to exceed ¼ db within the reel and ½ db from reel to reel. AUDIOTAPE oxides are magnetically oriented to provide increased output and reduced distortion. AUDIOTAPE is guaranteed splice-free in 1200 and 2500 ft. reels on 1½-mil plastic or "Mylar" base, and 1800 and 3600 ft. reels on 1-mil plastic or "Mylar". It has a moisture-repellent binder that assures smooth, quiet tape travel even under hot, humid conditions.



A Complete Line of the Finest Professional Quality Magnetic Sound Recording Tape

In this high fidelity age, the key to success in the recording business is QUALITY. Numerous broadcasting stations throughout the world found that AUDIOTAPE consistently delivers outstanding performance.

The complete line of professional quality AUDIOTAPE offers a base material and thickness to meet every recording need. And no matter which type you select, you can be sure you are getting the finest tape that can be produced. There is a complete range of reel sizes and types, too, including the easy-threading C-Slot reel for all 5 and 7-inch AUDIOTAPES.

AUDIOTAPE is available in the Regular Tape, Long-Recording Tape (50% more recording time), Super-Thin Tape, also the AUDIOFILM for the original recording of motion picture and TV sound.

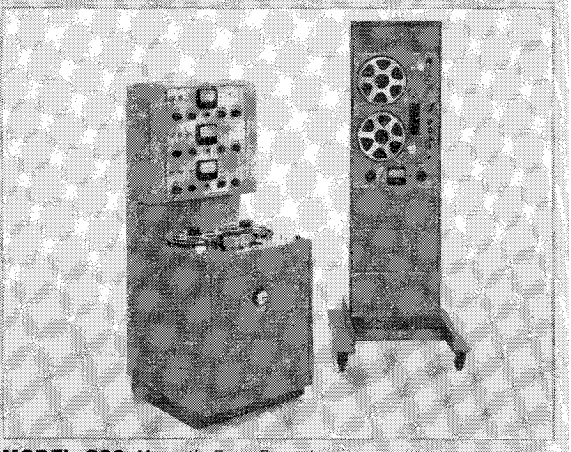
AMPEX

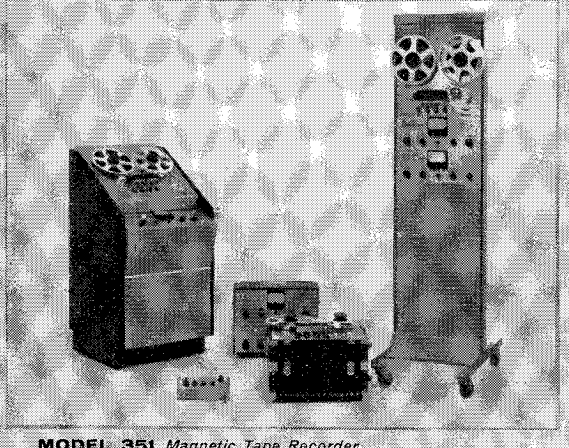
World Leader in Precision Magnetic Tape Recording Instruments

Ampex Tape Recorders are in service throughout the world in television and radio stations, and in professional sound recording studios . . . wherever finest quality is required.

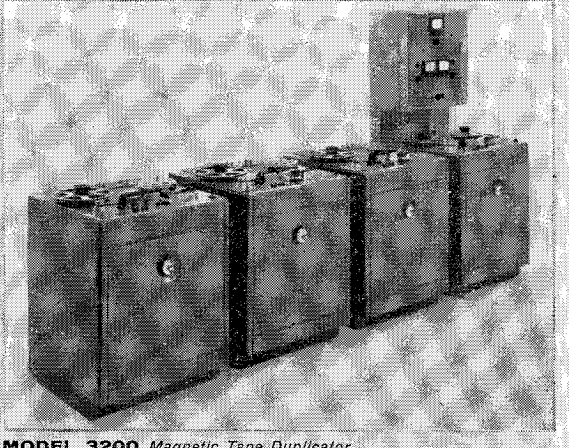
VR-1000B *Videotape* Television Recorder*
First commercially available Videotape Recorder. Magnetically records what the TV camera "sees," in either black and white or color. Playbacks look "live."



MODEL 300 *Magnetic Tape Recorder*
Standard of the professional recording industry, it consistently delivers the finest in audio reproduction. Available in as many as 8 channels, in console and rack mounting.



MODEL 351 *Magnetic Tape Recorder*
First choice of the broadcasting industry. Features printed circuits and miniature tubes. Available in console, rack and portable models, with one or two channels. Sold by dealers.



MODEL 3200 *Magnetic Tape Duplicator*
High speed duplication, with superb fidelity, of recorded master tapes. Makes up to 10 copies at one time. Available with one, two or four channel heads.

*TM. Ampex Corporation

Fully illustrated brochures, complete with specifications, are available on each recorder and the duplicator. Technical bulletins are also available on the following subjects: VIDEOTAPE RECORDING • VIDEOTAPE SPLICING • MULTI-CHANNEL RECORDING • MULTI-CHANNEL TECHNIQUES. See your distributor listed on next page or write to Ampex.

RECEPTION OF TELEVISION

continued from page 36.

Thirdly, conditions can arise in the lower atmosphere which extend the distance range for v. h. f. reception beyond that which occurs under »normal« atmospheric conditions. Certain meteorological factors are responsible for this, which lead to the refraction or »scattering« of radio energy from layers of air in the lower atmosphere which have different electrical characteristics from those of the air nearer the ground. Such conditions are liable to occur at any time of day and at any season of year, though, since they are often associated with anticyclones and periods of »settled« weather, they are somewhat more prevalent during summer than at any other season. The extended v. h. f. distance ranges may last for many hours. Reception by this means, which may be subject to some fading, may occur within the zone extending from the normal distance range out to about 800 km from the transmitting station. It can occur over all the v. h. f. and television frequencies. Good sound reception and, perhaps, tolerable picture reception may be obtained at the extended ranges whilst the meteorological condition lasts.

It will be seen, therefore, that none of the three conditions which give rise to extended v. h. f. reception ranges is dependable, in the sense that it can be relied upon to provide such reception at any given time.

There is, however, a relatively new system of v. h. f. communication which permits the attainment of extended ranges on these frequencies by utilising the »scattered« energy. This »forward scattering« can occur both in the ionosphere and in the troposphere and results in a weak, but with suitable apparatus, usable signal at medium long distances. The system is, however, at present only being used for military or experimental transmissions, and so its main interest to the listener is the interference to other transmissions which it may cause.

DX-PROGRAMMES

AUSTRALIA: **"R. Australia"**. "Australian DX'ers calling". Sat. 22.00, 07.15 (Apr.-Sept.), 08.45 (Oct.-March), 13.30, 16.00.
FINLAND: Finnish Broadcasting Co. DX-Prgr. First Fri. of the month: 16.00. First Sat. of the month 11.30.
DENMARK: "Danish State Radio". A special DX-bulletin is broadcast on Tues. (EST) at the end of the two No.Am. prgrs. (Wed. 02.00, 03.30) and Thurs. 09.50, 14.50.
GERMANY: **"Deutsche Welle"**. Every 2nd Mo. in the month 07.30, 16.30, 18.00, 23.00, 24.00. Tues. 03.30. – **"R. Berlin International"** First Mo. of the month at 17.00 (Swedish).
HAITI: **"St. 4VEH"**. Tues. 02.45. Wed. 10.45.
HOLLAND: **"R. Nederland"**: Mo. 07.13, 09.43, 14.43, 21.58. Tues. 02.13.

SWITZERLAND: **"Swiss Shortwave Service"**. Every Fri./Sat. (in all English transmissions) 07.50, 09.35, 13.20, 15.20, 17.20, 19.20, 02.05, 04.50.
U.S.A.: **"R. Boston"** (WRUL). "Swedish DX-prgr." in the Mo.prgr. 21.00.

AIR EXTERNAL SERVICES PUBLICATIONS

For overseas listeners to the short-wave transmissions of All India Radio, INDIA CALLING, a monthly programme journal in English, provides a service of advance programme information supplemented by some of the best broadcast talks on life in India today. It is published in three illustrated editions – Eastern, Western and European.

For listeners in West Asia, there are IDHAT-EL-HIND in Arabic, SADA-E-HIND in Persian and D'HIND AWAZ in Pushtu.

For East Asia, there is SUARA PENGHUBUNG published in Bhasa Indonesia and programme bulletins for Burmese, Chinese and Tibetan speaking listeners.

The journals are supplied free of cost to listeners in foreign countries. Requests may be forwarded either through the Indian diplomatic missions or direct to

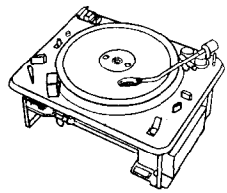
Schedule: 4 min. dash (1200 c/s), beginning at 00.00, 00.05, 00.10 etc. Then 3 × LOL in morse followed by ann. (lady's voice) of Argentine time.

SOLAR ACTIVITY

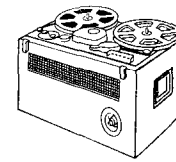
The ionospheric station at Linday (Harz), belonging to the Max Planck Institute, radiates on an unoccupied frequency between 3600 and 3620 kc/s every Fri. approx. 16.30 a report concerning sun spots.

BROADCAST STUDIO EQUIPMENT



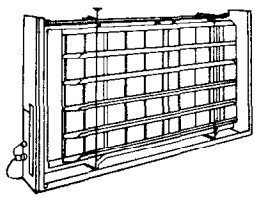
EMT 927
EMT 930

High-precision Transcription Turntables with dynamic pick-up, start-stop brake for remote controlled operation.



STUDER 30

Magnetic Tape Recorder for Studio and outside broadcast application. Special features: Balance for constant tape tension, weight only 70 lbs and remote control of all operations.
Tape speeds: 7,5 and 15 i. p. s.

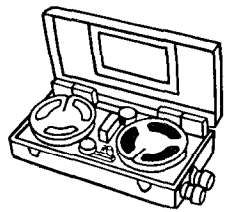


EMT 140

Reverberation Set for artificial echo effects with reverberation time adjustable between 1 and 5 seconds.

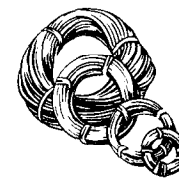
Dynamic and Condenser Microphones

for studio operation with directional and omnidirectional radiation characteristic.



STELLAVOX

Professional battery-operated, transistorized magnetic tape recorder.
Tape speed 7,5 i. p. s. Weight only 4 lbs.



Special Audio Frequency Cables

for studio purposes double screened, and especially HF proof.

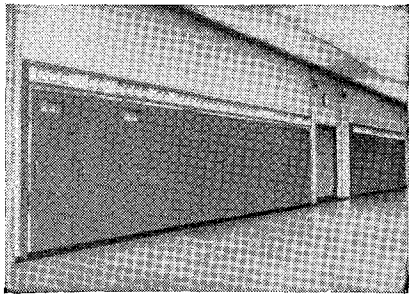
STUDIO CONTROL



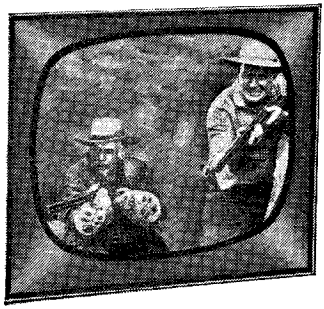
TRANSMITTER STATION

BUILDS COMPLETE STUDIOS

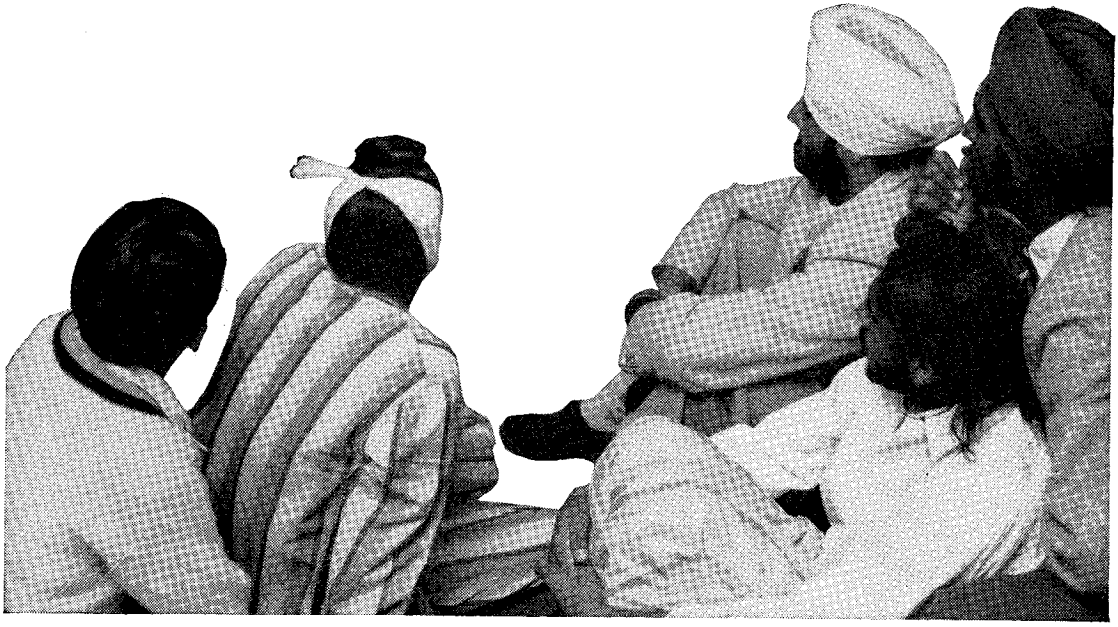
to transmit the programmes

Many countries owe their first glimpse of TV to the resource and enterprise of Pye. Today Pye transmission equipment is used by the television services of more than twenty-eight nations throughout the world. Even in such countries as America and Canada, where television is highly developed and keenly competitive, the Pye product is increasingly in demand. The company's pioneering work in the field of TV transmission and the succession of major developments which they have introduced have given Pye a place of leadership in the industry.

For full technical details write to Pye Ltd., Sales Dept., TV Transmission Division, Cambridge, England.



...and a wide range of domestic sets to receive them



Pye has also pioneered many of the outstanding advances in the design of domestic television receivers—such developments as the first transformerless TV, Automatic Picture Control, 13-channel tuning and the printed circuit. In many countries throughout the world the nightly TV programme is being received by Pye sets which benefit from the unsurpassed wealth of experience gained by this company in every field of radio and television. Today, the Pye trademark is accepted throughout the world, by producer and viewer alike, as a guarantee of quality, performance and reliability.

Pye Limited • Export Division • Cambridge • England

1. **Poland:** From the Polish Song and Dance Ensemble "Slask" – performance of a Krakowiak-dance during a TV-show in Katowice.

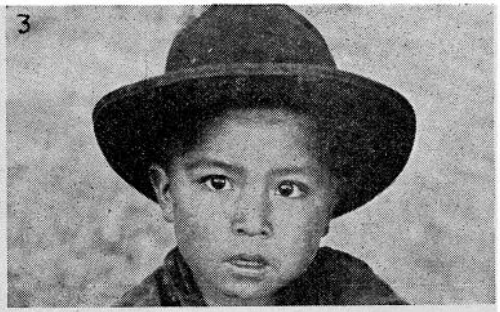
2. **Holland:** A Radio Nederland reporter talking to a miner in the Statemine "Hendrik", in the province of Limburg. (Radio Nederland Wereldomroep).

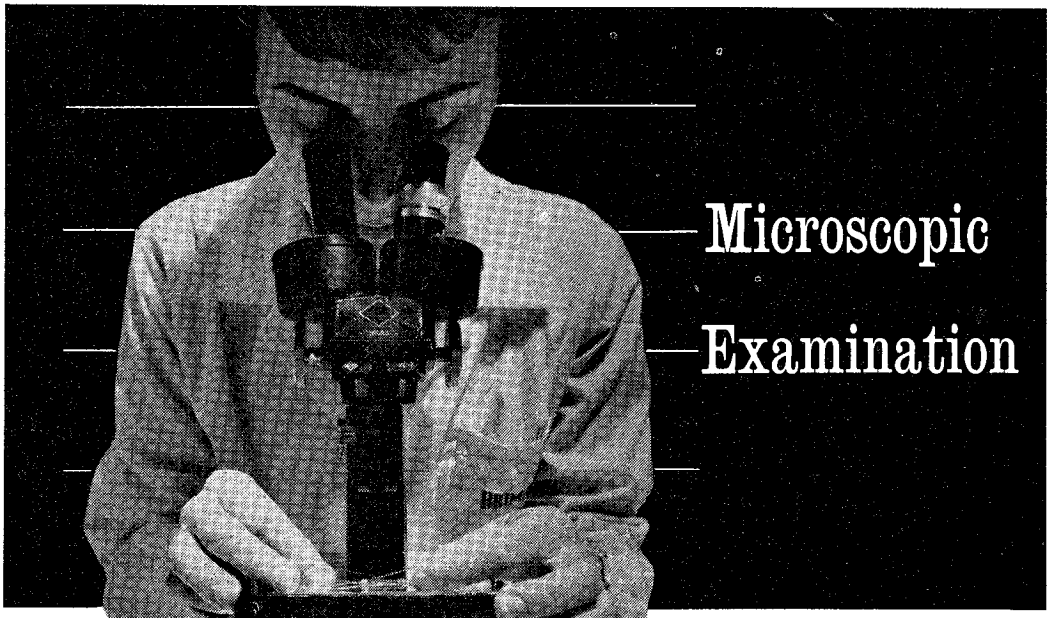
3. **Ecuador.** A typical child from the suburb of Quito.

4. **Greece:** Paysant-musiciennes from Peloponese during a popular festival in Athens.

5. **Hong Kong:** A type from the popular program: "Farmers Programme" (Radio Hong-Kong).

6. **Japan:** NHK play being televised. (Nippon Hoso Kyokai).





Microscopic Examination

The reliability of the Brimar 'T' range of valves has been "built-in" as the result of experience gained from a programme of examination and testing. One of these tests is illustrated. Sub-miniature valves for use in guided missiles are being microscopically examined for mechanical defects. The degree of magnification is more than sufficient to ensure that no flaw in the structure can escape detection—a vital precaution in equipment which is subjected to extreme stress and strain. The information derived from this and other tests on valves for special applications is used to improve manufacturing techniques on commercial types, so making Brimar the obvious choice when the demand is for a *reliable* valve.

HOW TO USE THE WORLD RADIO HANDBOOK

The World Radio Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver. For the beginner, it will serve as an introduction to the thousands of stations broadcasting in all parts of the world. For the experienced listener, it will be an invaluable guide to program services of specific countries and an able assistant in identifying stations.

International broadcasting offers armchair pleasure to the listener in the form of education, information and entertainment. For a country or government it represents a worldwide voice for dissemination and intrepretation of news and for acquainting those beyond its borders with the national culture and assets. In our modern age when the world has been shrunk by the speed of travel and commerce, mutual understanding is more important than ever before. International radio communication is a valuable aid in nourishing goodwill and understanding between peoples everywhere, and its value to citizens of all countries has never been higher.

For many years international radio, particularly in the short-wave range, has been a principal means of entertainment and enlightenment in some parts of the earth, such as the Pacific islands and sections of Africa. In other areas, such as Europe, world broadcasting has been one of several major communications media. In still other countries, international radio has become an important force and has begun to attract listeners in sizable numbers.

The principal contents of this book are divided into two sections: 1) a listing by country of stations, programs, times, call signs, etc.; and 2) a listing by frequency and wave length of the main international long-, medium- and short-wave stations.

The first section, beginning on page 56, is divided into eight geographical categories: Europe, Africa, the Near East, the East, the Pacific, North America, Central America and South America. Countries are arranged alphabetically in each geographical category. The information on the broadcasting services of each country includes:

Local time in relation to Greenwich Mean Time; principal **Language** or **Languages** of the country; number of **Population**; total number of **Receivers in use** and in most cases the **Power** used.

Names and addresses of broadcasting companies (commercial broadcasts are identified as such).

Names and titles of leading officials of each company.

List of AM and FM stations operated by each company with call signs, frequencies, wave lengths and power expressed in kilowatts.

Every radio station whether in the long-, medium- or short-wave range, has an identifying call sign of three to five letters or a combination of letters and figures of which the first, or first two, denote nationality in accordance with the international list of prefixes (See page 20). Some stations - those in the United States, for example – always use these call signs when identifying themselves. Others do not.

Since many broadcast stations also operate FM and TV stations, a common practice is to authorize the use of the call letters of the AM stations followed by a dash and FM or TV, as the case may be.

Short-wave stations usually employ directional aerials to beam their programs to particular areas on frequencies and at times calculated for best reception. The reception areas give their names to the services, e.g.: European Service, Near Eastern Service, Latin-American Service, Far Eastern Service, etc. The language employed is that of the listeners in the area to which the broadcast is directed. The best reception usually is obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas. Short-wave propagation conditions change continually because of influences of daylight and darkness, seasonal considerations and solar activity. Consequently, good reception requires waveband changes from time to time.

Long- and medium-wave AM stations are divided into three categories:

1) **Main stations**, which are so powerful they generally can be received throughout the country of origin and often in neighboring countries. Most broadcasts emanate from these stations.

2) **Regional stations**, which can be received only within a certain region of a country. Broadcasts normally consist partly of original programs and partly of re-transmitted programs of main stations.

3) **Relay and local stations**, which mostly re-transmit main-station programs. These stations have low power ratings and can be heard only within a limited area.

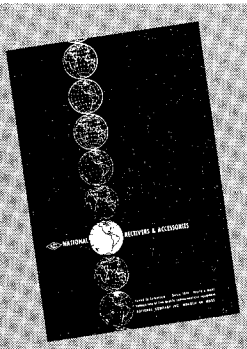
FM stations constitute another category. They give listeners an interference-free reception but they have a short radius and are considered local stations.

Frequency and wavelength. Frequencies are measured in kilocycles per second (kc/s) and megacycles per second (mc/s). A kilocycle is 1,000 cycles; a megacycle is 1,000,000 cycles. Wavelengths are measured in metres (m) and divided into the following groups: long waves, medium waves and short waves (15–30,000 kc/s). The FM band (88–108 mc/s or 87.5–100 mc/s in the European System) and TV band identified by frequency rather than wavelength are in the very high frequency (VHF) range:

TV-frequencies	Band I	Band II
European	41–68	174–223 (mc/s)
American	54–88	174–216 (mc/s)

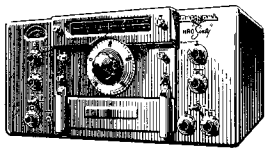
An FM broadcast requires a channel 20 times wider than that used for AM, but a TV transmission of combined picture and sound needs about 6 times the spectrum space occupied by the entire AM medium wave broadcast band.

Continued page 48



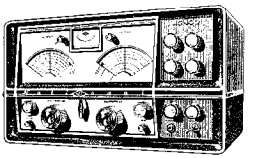
Send for this FREE National Catalog for up-to-date information on America's finest receivers!

Gives Complete Specifications, Full List of Accessories, Latest Prices on these Famous NATIONAL RECEIVERS.



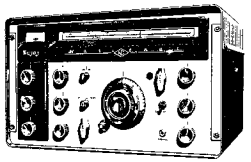
HRO-60

Features widest frequency coverage of any receiver available, 50 kc to 54 mc . . . the world's most famous receiver.



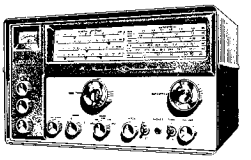
NC-400

National's newest general coverage receiver. Covers 540 kc to 31 mc in 7 bands. 18 tubes (including rectifier) AM-CW-SSB. May be used in fixed channel or diversity operation.



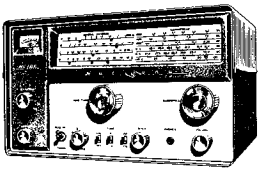
NC-303

National's newest "ham band only" receiver. 10 separate dial scales cover 160 to 1¼ meters. Dual conversion. New 5-position "IF SHIFT" provides optimum selectivity for a CW-PHONE-PHONE NET-VHF-Selectable SSB.



NC-109

America's lowest-priced SSB receiver! Covers 540 kc to 40 mc. National's exclusive "MICROTOME" filter provides 5 degrees of sharp selectivity for all modes of operation. VOICE-CW-SSB.

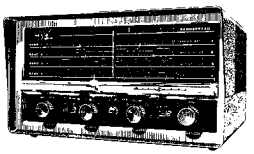


NC-188

Low-priced general coverage receiver. Covers 540 kc to 40 mc, and is directly calibrated for the 4 general coverage ranges and five bandspread ranges for 80-10 meter amateur bands.

NC-66

AC/DC-Battery Portable. Covers 150 kc to 23 mc in 5 bands. Exclusive RDF-66 Direction Finder Accessory provides accurate navigation for small boats.



NC-60

Special "A"

. . . First all-new, low-priced shortwave/standard broadcast receiver in over 10 years! Covers 540 kc to 31 mc in 4 bands. 110 volt AC/DC. Built-in speaker.

HOW TO USE THE WRH *continued from page 46.*

Every radio emission has a quantity measurable in both frequency and wave length and since the velocity of propagation in space is, in round figures, 300,000,000 metres per second, any one of the quantities–metres, kilocycles or megacycles – is readily converted into the other forms by means of the following formulae:

Metres to Kilocycles
Metres = 300,000/frequency (kc/s)

Kilocycles to Metres
Kilocycles = 300,000/Wavelength (metres)

Metres to Megacycles
Metres = 300/frequency (mc/s)

Megacycles to Metres
mc/s = 300/Wavelength (metres).

The majority of international short-wave broadcasts will be found on the following metre bands (m.b.): 49 m.b., 41 m.b., 31 m.b., 25 m.b., 19 m.b., 16 m.b., 13 m.b., and 11 m.b. The 31 m.b., 25 m.b., 19 m.b. and 16 m.b. are the most active of the eight bands and some of the most rewarding programs are found here. However, many short-wave stations operate outside these wave lengths. The 60 m.b. and 80 m.b. are used for local broadcasting (reception over relatively short distances), particularly in the USSR, South and Central America, Canada, Australia and in Central Africa, where short-wave broadcasting is an integral part of national domestic broadcasting.

In many parts of the world short-wave transmissions are picked up and re-broadcast from local stations or short-wave relay stations. In many territories, there are wire broadcasting services where the transmissions are centrally received and are then sent out by wire distribution systems. As examples of the last we would mention Hong Kong, which has over sixty thousand wire distribution loudspeakers; and Malta, where there are between forty-five and fifty thousand.

Many programs are broadcast simultaneously from several transmitters on different wave lengths, enabling you to select the band most clearly audible in your area. If reception on one wave length is poor, you should examine conditions on others employed by the same station. On page 24 is a table of the most suitable bands for short-wave reception in every part of the world at various times of day throughout the year. In an article on page 10 T. W. Bennington tells you about the reception conditions of the different bands during 1960.

Program times used in the listings are based on the 24-hour clock. Midnight is 00.00 hrs., 3 a.m. is 03.00 hrs., 9 a.m. is 09.00 hrs. and midday is 12.00 hrs. Then, instead of starting another 12-hour cycle (p.m.), under the 24-hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hrs., 10 p.m. is 22.00 hrs., and so on until 23.59 hrs. (11:59 p.m.) is reached and a new 24-hour cycle starts. The system eliminates any possible confusion between times a.m. and times p.m.

Time conversion. All programs are listed in GMT. To find the time when a program can be heard in your area it is necessary to equate both your local time and the time at broadcast point with Greenwich Mean Time (GMT). By referring to the World Time Chart on page 18 you can determine how many hours your local time is ahead or behind GMT. The program listing for each country gives you the same information as regards point of broadcast. Suppose you live in Ottawa (5 hrs. behind GMT) and want to hear a program from Tokyo (9 hrs. ahead of GMT). The broadcast is at 16.00 hrs. local Tokyo time. This reduces to 07.00 hrs. GMT (16.00 hrs.—9 hrs. = 07.00). Remaining problem: when it's 07.00 hrs. GMT what will it be in local Ottawa time? Since Ottawa time is 5 hrs. behind GMT, this figure is subtracted from 07.00 hrs. and gives you 02.00 hrs. So to hear the program broadcast from Tokyo at 16.00 hrs., you must tune in at 02.00 hrs. Ottawa time. Daylight saving time (which adds an hour to local time) and the dates it is in effect in various parts of the world are noted in the World Time Chart. If you are listening at sea you should consult the radio-officer for the difference between ship time at your position and GMT.

Daily programs. Under this heading in the listings you will find information concerning the total broadcasting hours on the different frequencies employed and in the different languages by a particular station, as well as surveys of the news and in many cases other fixed programs of interest such as national music, mailbag, language lessons, weather reports, program previews, time signals, etc.

Identification of stations. Language alone is not conclusive evidence of a station's nationality since international stations often beam broadcasts to foreign areas in the language of the listeners. Hearing a program in French or Spanish, for example, does not necessarily mean the station is French or Spanish. To make sure of correctly identifying a station it is necessary to wait for the identification announcement which every station broadcasts at regular intervals. Call signs and other means of identification are given in this book for practically all stations listed.

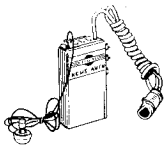
For identifying stations it also is important to know the signals used during the intervals between programs. Under each station, therefore, you will find an indication of the type of signal used, and in many cases a reproduction of the musical notes of the signal. Quite often one transmitter uses several wavelengths, as noted above, and employs different aerials designed to radiate signals to the best advantage in respect of each service. The various call signs sometimes are used in these instances to identify individual wavelengths.

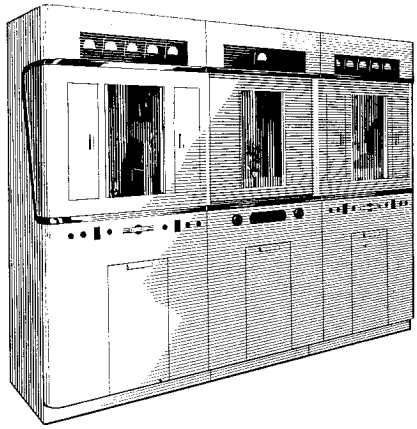
The second section of this book, beginning on page 181, lists long-, medium- and short-wave stations according to frequency and wavelength. The information includes call signs, location of station or stations on a given frequency and station power in terms of kilowatts.

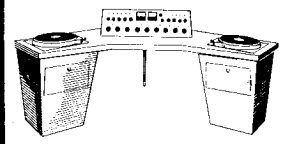
How to identify a station by frequency or wavelength:

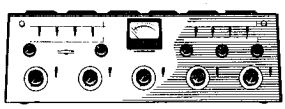
When you come across a station that is unknown to you, proceed as follows for identification: read the approximate frequency or wavelength indicated on your dial. Next, turn to the table beginning on

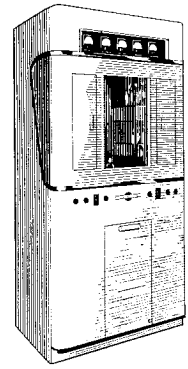
Continued page 50.











HIGH FIDELITY BROADCASTING FROM COLLINS

your one complete source for quality broadcasting equipment

Collins' equipment is designed for economical, high fidelity radio broadcasting. Collins high fidelity transmitters deliver greater audio range with minimum distortion. Typical audio frequency response is within ±1.5 db from 30 to 15,000 cps. Distortion is less than 3% from 30 to 15,000 cps for 95% modulation. And Collins has it all — a complete radio station — from microphone to antenna — your complete broadcast equipment source.

AM TRANSMITTERS

21E/M 5/10 kw Transmitters—feature for feature the most economical transmitter available, extremely stable vacuum type crystals eliminate need for crystal ovens. Conservatively rated components, easy access to all components, forced air cooling, long tube life, compact size. Circuitry is simplified, with only ten tube types in the 21E/M.

20V 1000/500 watt, 550A 500/250 watt, 300J 250/100 watt Transmitters — each housed in a single identical cabinet. Same fine features as 21E/M.

POWER INCREASE PACKAGES

Increase 300J, 550A, 21E Power Overnight — That's as long as it takes to install the Collins Power Increase Package. You don't lose a minute of commercial time — start with sign-off and by sign-on the next day you operate the 300 J at 500 or 1,000 watts, 550A at 1,000 watts, the 21E at 10,000 watts. This money-saving service is typical of the advanced design and quality engineering in all Collins Broadcast Equipment.

SPEECH INPUT CONSOLES

212F and 212E—supply complete control over simultaneous broadcasting and auditioning. 212F single channel from any of 12 possible inputs. 212E dual channel from 22 possible inputs. Both monitor program and remote lines, control speakers and warning lights.

REMOTE AMPLIFIERS

212Z—lightweight, ruggedly constructed remote four-channel transistorized unit weighs only 22 lbs. with batteries, comes in typewriter size carrying case. Built-in tone oscillator for line level set up and automatic power changeover.

Micromote Transistorized Remote Amplifier — Weighs only 10 oz. complete. Fits into coat pocket or on belt. Contains six transistors and four 200-hour mercury batteries. Comes complete with ear-plug head phone and with or without Turner 58A lavalier microphone.

TURNTABLE EQUIPMENT

TT-400/200—3 moving parts in drive mechanism; 3 speed selector; unique 7″ indentation for 45 rpm discs. Available in 16″ 4-pole (TT-400) or synchronous (TT-400S) and 12″ 4-pole (TT-200) or synchronous (TT-200S).

Custom Control Desk—Individually designed to your requirements at low cost. Ask for a proposal.

Whatever your broadcast needs, specify Collins, your complete source for quality broadcast equipment. For complete information call or write us.

International Evangelical Radio Station
Emetteur Protestant International (EPI)
Internationaler Evangelischer Radiosender
Internationell Protestantisk Radiosändare

THE PROJECTED EUROPEAN PROTESTANT RADIO STATION IN SWITZERLAND BROADCASTING THE GOSPEL IN:

Arabic, Bulgarian, Czech-Slovak, Danish, Dutch, English, Esperanto, Finnish, French, German, Hebrew, Hungarian, Italian, Norwegian, Polish, Portuguese, Rumanian, Russian, Slovene, Spanish, Swedish.

- It is intended to broadcast 8 hours daily over several wave bands in sufficient power to cover all European countries and beyond.
- Leaders of State Churches and Free Evangelical Churches in 58 nations have given their support to the project.
- The Station will be under the supervision of an Interdenominational European Committee.

Details regarding this project are issued in "epi news service" (German, French, Italian, Dutch and Spanish editions are also available). For further information and FREE Radio Brochure, write to:

E. P. I. – P. O. Box 392, BERNE 2 (Switzerland).

HOW TO USE THE WHR *continued from page 48*

page 184 and ascertain what stations are working in that neighbourhood. When you have narrowed the field to one or two possibilities and have noted details of the program and language, check these data against the program listings to determine whether the station is scheduled to be broadcasting at that time and the type of program listed. For confirmation it is advisable to wait for the station announcement or interval signal.

Verification by QSL-cards. As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL-card (verification) or letter. Most listings indicate whether a station uses QSL-cards or answers by letter, and when return postage is required this is stated also. Return postage should be sent in the form of an International Reply Coupon, obtainable at post offices in the 99 countries of the International Postal Union. Reports should be sent to the station address as given in the program listings. They can be written in English in most cases, but Spanish is preferred by South and Central American stations.

The new edition of How To Listen To The World (see adv. page 01) gives all necessary information about how to write reports to stations.

International television stations and programs for all parts of the world are listed in the section of this book beginning on page 170.

Other useful information includes a list of stations devoted to time signals and frequency-standards broadcasts on page 40, and an index to broadcasting organizations and religious broadcasting organizations incl. a list of missionary stations on the pages 28.

The reception reports mentioned above are particulary useful to radio engineers in selecting the most suitable wave lengths for broadcasts beamed to your area. Reports are more meaningful if the SINPO or "555" code is used. The codes are as follows:

SINPO-code					"555"-code		
S	I	N	P	O	S	I	O
					0 inaudible	0 very strong	0 nil
5 excellent	5 nil	5 nil	5 nil	5 excellent	1 very weak	1 strong	1 very poor
4 good	4 slight	4 slight	4 slight	4 good	2 weak	2 fairly strong	2 poor
3 fair	3 moderate	3 moderate	3 moderate	3 fair	3 fairly strong	3 weak	3 fair
2 poor	2 severe	2 severe	2 severe	2 poor	4 strong	4 very weak	4 good
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable	5 very strong	5 none	5 very good

S = Signal strength. I = interference. N = noise.
P = propagation disturbance. O = Overall merit.

Example: 543 means a very strong signal with weak interference reducing the overall reception merit to fair.

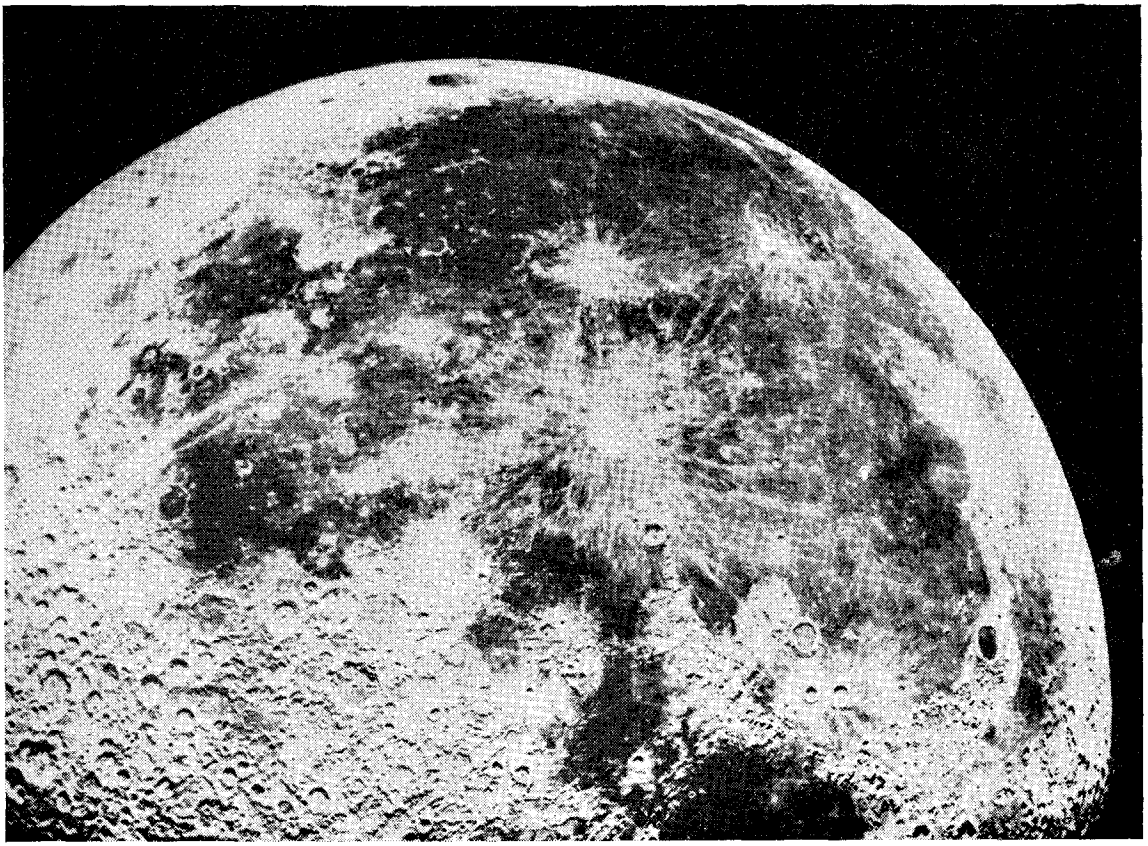
FRESH WORLDS TO CONQUER.....



In developing new and improved types of CRT's, valves and semiconductors for radiocommunication we are never at a loss for fresh worlds to conquer. Every step forward opens up broader horizons.

From the earliest days of the radio industry we have been helping to solve the problems of scientist and setmaker.

Now would be a good time to bring Siemens Ediswan into *your* programme for tomorrow.

BBC PUBLICATIONS

A week's BBC overseas programmes in detail and in advance

London Calling is a weekly bulletin giving the week's BBC overseas programmes in detail, with notes about outstanding broadcasts. Printed on air mail paper, it reaches listeners throughout the world ahead of the broadcasts.

For Europe

Advance schedules of the BBC European Service broadcasts in English and in many other languages appear weekly in London Calling Europe. *Also included are texts of 'English by Radio' lessons and articles about the programmes.*

London Calling Europe

In German

Hier Spricht London *is a weekly magazine in German containing advance details of a week's broadcasts in the BBC European Service in English and German. These include the daily English-teaching programmes, which are invaluable for language teachers and students. Texts of some of the lessons are also published.*

HIER SPRICHT LONDON

What the experts say...

From Britain's universities, from the business world, the churches, and the newspapers, experts come to the BBC to give informed reports and opinions on matters of current and of lasting interest.

The pick of these broadcasts are printed in The Listener.

FOR A FREE SPECIMEN COPY AND SUBSCRIPTION DETAILS OF ANY OF THE ABOVE PUBLICATIONS PLEASE WRITE TO

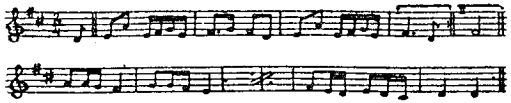
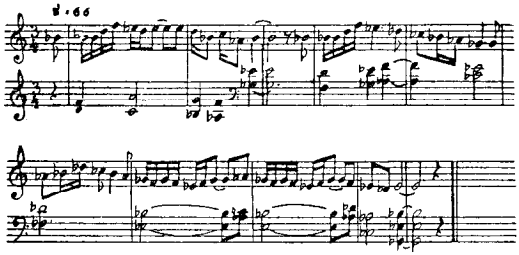
Tromsö S.W. Tr. broadcasts daily the entire Home Sce. on 11850 kc/s.
ANN.: "This is Radio Norway with its shortwave service for Norwegians abroad".

INT.-SIG.: Every s.w. transmission is introduced by the following theme, which originates from an ancient folk tune from Hallingdal



Five minute previous to every s.w. tr. the following signal is sent:



Message to our English-speaking audience: In our daily prgrs. for Norwegians abroad we will usually have a section of Norwegian music or music presented by Norwegian artists. This musical section, which lasts 15 to 20 minutes, is introduced in **English** as well as in **Norwegian.** On Wed. and Sat. you can listen to "our **"Letter Box Programme"**, in which we play our listeners' **request records.** We often receive letters from listeners in Norway with request to play a record with a greeting to one of their relatives abroad, but we regret to be unable to comply with these requests. Every Sunday we have an additional prgr. in English, **"Norway this week"**, in which we try to present Norway in different ways through music and feature prgrs. We are very grateful for comments on our transmissions. Reports are answered by QSL-card. Return postage is not necessary. Our postal address is: **RADIO NORWAY,** Oslo, Norway.

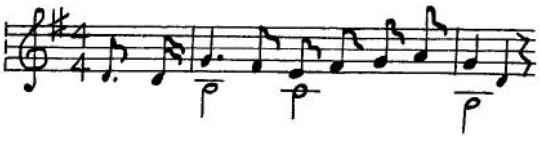
MOSCOW CALLING



Moscow Radio broadcasts for foreign listeners on short and medium waves in 38 foreign languages and 7 languages spoken by nationalities inside the Soviet Union.

Moscow Radio tells about life in the Soviet Union and about the most important international events.

Moscow Radio's broadcasts comprise news, comments, interviews, chronicles and also special programmes for women, children and young people, science and techniques, and programmes on sporting events, literature and concerts.

In Moscow Radio you can hear political personalities from the Soviet Union and leading Soviet men of science and culture, and also foreign guests: political and public personalities, representatives of business circles, scientists, artists, workers, and peasants.

Moscow Radio replies to its listeners by radio and letter, transmitting concerts according to their wants, organizing different competitions sending prizes to the winners.

Every two months first-hand information on the world of broadcasting is offered to you in the

E. B. U. REVIEW

published by the European Broadcasting Union

Part A – Technical – will keep you up-to-date regarding the long- and medium-wave situation in the European Broadcasting Area and

the latest developments in the television and sound broadcasting networks on metric waves,

including such questions as

wave propagation and frequency assignments in all of the broadcasting bands,

the installation and operation of transmitting stations and studio centres, of recording systems and outside-broadcast facilities, both for sound and television,

Eurovision, etc.

Part B – General and Legal – will inform you of administrative, programme and legal developments in radio and television throughout the world

such as

the activities of international organisations concerned with broadcasting in all non-technical fields,

the progress of radio and television organisations in most countries from the point of view of administration, finance and programmes,

analyses of new Copyright Acts and all legislation and jurisprudence touching upon broadcasting.

ANNUAL SUBSCRIPTION:

Part A (six numbers): price 150 Belgian francs. Publishers: E. B. U. Technical Centre, 32, Avenue Albert Lancaster, Bruxelles (Belgium).
Part B (six numbers): price 15 Swiss francs. Publishers: E. B. U. Administrative Office, 1, rue de Varembé, Geneva (Switzerland).
A combined subscription to Parts A and B (twelve numbers) may be ordered either from Brussels or from Geneva (price 300 Belgian francs or 27 Swiss francs).

RELAY STATIONS:
For frequencies of the relay stations, refer to the individual countries: Germany, Greece, Dodecanese Islands, Great Britain, Tangier, Ceylon, Hawaii, Ryukyu Islands, and Philippines.

ANNOUNCEMENT:
Each program ends with these words spoken in English: "This program has come to you from the United States of America". The station identification is then announced in English.

INTERVAL SIGNAL:
Choir of brass playing a 10 note version of "Columbia, the Gem of the Ocean". This musical symbol is played at the beginning of a transmission, during station breaks, and at the conclusion of a transmission. At the beginning of a transmission the sign on announcement is followed by 3 minutes of musical symbol made up of alternate 5 seconds music and 5 seconds silence.

VERIFICATION by QSL-card. No return postage required.

FUTURE PLANS:
When the Voice of America's East Coast facility in the U.S. is completed in 1962, there will be six 500 kW short-wave transmitters as well as six 250 kW's, not only to permit better reception in Europe and parts of Africa, but also to improve the quality of our signals rebroadcast by our relay bases in Europe and the Mediterranean.

ARMED FORCES RADIO and TELEVISION SERVICE

ADDR.: Office of Armed Forces Information and Education, Washington 25, D.C.
This office exercises overall policy control of the Armed Forces Radio and Television Service. This mission of AFRTS is to keep U.S. sce. men and women stationed outside the States the best informed service personnel in the world on current events. **All broadcasts are in English.** News, sports and other timely matter is beamed overseas directly by twelve powerful tr. on the U.S. Atlantic and Pacific coasts. These s.w. broadcasts serve the overseas radio stations, which rel. them locally. Prgrs. other than news and locally produced prgrs. are derived directly from the U.S. Commercial Networks. N. is compiled directly from the wires of A.P., and U.P.I. (United Press International). AFRS presents regular s.w. prgrs. from both Los Angeles and New York City, using the transmitters of the V.O.A.

EUROPEAN SERVICE (from New York).

Receivers in use: 150 millions.

EDUCATIONAL STATIONS (non. Comm.

ADDR.: Office of Education, Washington 25, D.C. – **L.P.:** Chief Radio-Television: Dr. Franklin Dunham.

Educational and Television Center: Coliseum Bldg., Columbus Circle, New York City, N.Y.

NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS: (NAEB.)

The national independent professional association, which since 1925 has represented the interests and needs of educational television and radio broadcasters, represents appr. 75% of the educational stations and production centers of the United States (appr. 90% exc. those identified as theological or religious st.).

ADDR.: Executive Office: 14 Gregory Hall, Urbana, Illinois.

L.P.: Exec. Dir.: Dr. Harry J. Skornia. Associate Dir.: H. E. Hill.

Stations: 148 educational institutions and organizations owning and operating a total of 154 educational radio and 36 T.V.st's.

Activities and Functions: The NAEB is the Association of American institutions operating educational, cultural and public sce. radio and TV st.'s and production centers. Its services include workshops, seminars, regional and national annual conferences, personnel-upgrading services, and employment agency, legal, research and other operational consultant services, and numerous publications in radio and T. V., incl. a monthly Newsletter and a bi-monthly journal available by subscription; abroad at $ 5.00 per year. It has an exchange-advisory membership relationship with most national educational organizations. The NAEB also operates a radio network which duplicates via tape and distributes to memberstations ten hours of programming per week. At present there are some 82 stations in this network. Exchanges of programs with other nations are welcomed. It also actively cooperates with various international organizations (European Broadcasting Union, UNESCO, etc.), and the national systems of various other countries (R.T.F., BBC, RAI, CBC and others), exchanging prgrs., publications and personnel with the broadcasting organizations of over 20 nations in Europe, Asia, Australia and Africa, as well as those in No., C. and So. America. According to federal communications commission regulations, non-comm. educational FM stations have no restrictions on transmission time:

COMMERCIAL STATIONS

Each station is required to operate at least two-thirds of the hours it is authorized to operate between 6:00 AM and 6:00 PM, and two thirds of the hours it is authorized to operate between 6:00 PM and midnight. If authorized to operate unlimited time, it may operate for the entire 24 h.

RADIO STATION KGEI INC., The Voice of Friendship.

ADDR.: Box 887, Belmont, Cal.

5. **United Nations Television:** Progr. "On Law of the Sea" UNTV has recently completed a fifteen minute television programme on the law of the sea, with Sir Hubert Wilkins, the explorer, as narrator, and Mr. Constantin Stavropoulos, Legal Counsel to the U.N., who sums up the achievements of the recent UN Conference on the Law of the Sea held in Geneva. The programme, which includes film sequences, illustrates the many aspects of the subject, ranging through pearl fishing and oil drilling on the continental shelf to the problem of territorial waters and the regime of the high seas. It has been issued in English, German, Italian, Serbo-Croat and Spanish. Sir Hubert Wilkins, Mr. Constantin Stavropoulos and producer Jose Quijano on the set in UNTV studio.

SHORT WAVE MAGAZINE

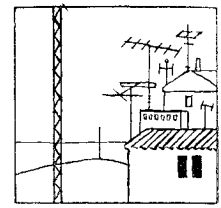
(Established 1937)

One of the world's leading Amateur Radio publications covering transmission, reception, operating results, competitive working, design and construction. Regular features include "DX Commentary" and "VHF Bands", outstanding in their fields. Monthly, 56 pages. Subscription 33s. post free. 34 Danish Kr., 5.00 American dollars, 21.45 Swiss francs, 1650 French francs, 20 German Dm., 2885 Italian lire.

SHORT WAVE MAGAZINE LTD.,

55, Victoria Street, London S.W.1, England.

WORLD TELEVISION



The principal television systems:
Definition refers to the broadcasts standard which is normally stated in terms of the number of lines which make up the image. Reference in the following surveys is made throughout merely to 405 lines, 525 lines, 625 lines (CCIR*), 625 lines (Soviet**) and 819 lines respectively.
Details of these five definitions are given in the following table:

	Systems			
Number of lines per picture	405	525	625*)	819
Video bandwidth (mc/s)	3	4	5	10.4
Channelwidth (mc/s)	5	6	7	14
Sound carrier relative to vision carrier (mc/s)	÷3.5	+4.5	+5.5	: 11.15
(Sound carrier relative to edge of channel (mc/s))	0.25	÷0.25	÷0.25	+0.10
Interlace	2/1	2/1	2/1	2/1
Line frequency (c/s)	10.125	15.750	15.625	20.475
Field frequency (c/s)	50	60	50	50
Picture frequency (c/s)	25	30	25	25
Sense of vision modulation	Positive	Negative	Negative	Positive
Level of black as percentage of peak carrier	30	75	75	25
Sound modulation	AM	FM	FM	AM

* The International Radio Consultative Committee.
** The characteristics are the same as 625 lines CCIR exc. for a difference in bandwidth: video bandwidth 6 mc/s, channelwidth 8 mc/s, sound carrier relative to vision carrier +6.5 mc/s.
Differences in Belgian TV from resp. CCIR 625 and French 819:

	CCIR 625	Belgian 625	French 819	Belgian 819
Video bandwidth (mc/s)			10,4	5
Channelwidth (mc/s)			14	7
Sound relative to vision (mc/s)			÷11,15	+5,5
Sound relative to edge of ch. (mc/s)			+0,10	÷0,25
Vision modulation	Negative	Positive		
Level of black as percentage of of peak carrier	75	25		
Sound modulation	FM	AM		

The following pages give you the data of the different TV stations of the world. The channel is indicated by a letter followed by a figure. The letter indicates the technical data of the systems which are in use (A: American, B: British etc.) and the figures is the channel number.
The powers for vision and sound are indicated by a fraction, the numerator indicating the number of kW (ERP) for vision and the denominator for sound, for example 6/1.5 means vision 6 kW ERP and sound 1.5 kW ERP.

TELEVISION CHANNELS

A: American system:
Sound: F.M. Vision: Negative mod.

EDUCATIONAL TV-STATIONS

The 52 operating TV educational stations are mainly situated in the large cities and university centres. They are of three types: 1) Community stations supported by voluntary funds; 2) University stations supported by State and local budgets; 3) State-owned networks covering entire divisions of the country supported entirely by taxation. An interesting development for educational purposes is closed-circuit TV, limited to universities and to individual school-systems. A prgr. sce. known as the National Educational Television and Radio Center located at Ann Arbor Mich., supplies educational TV prgrs. to the present stations and in addition, distributes its prgr's. to both closed circuit and film projectors which are in use in thousands of schools.
